OpenType Layout Features

For details about OpenType Layout Features see the [OpenType Layout tag registry](#).

Substitution Features

aalt Access All Alternates

This feature makes all variations of a selected character accessible.

fin Terminal Forms

Replaces glyphs at the ends of words with alternate forms designed for this use. This is common in Latin connecting scripts, and required in various non-Latins like Arabic.

medi Medial Forms

Replaces glyphs in the middles of words (i.e. following a beginning and preceding an end) with alternate forms designed for this use. Note: This is different from the default form, which is designed for stand-alone use. This is common in Latin connecting scripts, and required in various non-Latins like Arabic.

init Initial Forms

Replaces glyphs at the beginnings of words with alternate forms designed for this use. This is common in Latin connecting scripts, and required in various non-Latins like Arabic.

rlig Required Ligatures

Replaces a sequence of glyphs with a single glyph which is preferred for typographic purposes. This feature covers those ligatures, which the script determines as required to be used in normal conditions.

frac Fractions

Replaces figures separated by a slash with 'common' (diagonal) fractions.

sup Superscript

Replaces lining or oldstyle figures with superior figures (primarily for footnote indication), and may replace lowercase letters with superior letters (primarily for abbreviated French titles).

ord Ordinals

Replaces default alphabetic glyphs with the corresponding ordinal forms for use after figures.

ss01 Stylistic Set 1

Glyphs in stylistic sets may be designed to harmonise visually, interact in particular ways, or otherwise work together.

ss02 Stylistic Set 2

ss03 Stylistic Set 3

ccmp Glyph Composition / Decomposition

To minimize the number of glyph alternates, it is sometimes desired to decompose a character into two glyphs. Additionally, it may be preferable to compose two characters into a single glyph for better glyph processing. This feature permits such composition/decomposition.

Positioning Features

kern Kerning

Adjusts amount of space between glyphs, generally to provide optically consistent spacing between glyphs.

mark Mark Positioning

Positions mark glyphs with respect to base glyphs.

mkmk Mark to Mark Positioning

Positions marks with respect to other marks. Required in various non-Latin scripts like Arabic.
