History of Medicine

Throughout history, various societies and cultures have developed different views in their approach to illnesses and diseases. One of the most important periods in the development of medicine at all, especially medieval medicine, which lasted from the 9th to the 13th century, is called " the Golden Age of Arabic Medicine". The books of Arabic science that came about in this period are not only by Muslim authors, because Arab civilization is the result of consecutive and continuous efforts of various nations, regardless of the religion, race and colour of the skin, who lived and produced in the Arab region. In ancient times, people used to cure sickness by using plants, herbs and other materials. In countries such as Egypt, Greece, Rome, Mesopotamia, India and China, medicine was magical and mythological and diseases were attributed mostly to the supernatural forces. Thus, before hospitals developed, patients were treated mostly in temples. The practice of medicine during the Middle Ages was empirical; it focused mainly on curing illnesses rather than discovering their causes. At that time, cures continued to be a mixture of superstitions, religion, herbal remedies, bleeding and purging; people were bled to reduce inflammation which was then thought to be the root of all diseases. Moreover, medical schools were established, but most people never saw a doctor because of the high-cost treatments. Instead, patients were treated by local wise people who were skilled in the use of herbs, or by priests, or barbers. Around the 16th century, medicine witnessed groundbreaking developments such as vaccination, human anatomy, surgery and microbiology.

Choose the right answer a, b, c, or d

- The books of Arabic science came as the result of of various nations
 - following efforts
 - Muslim authors efforts
 - successful person efforts
 - famous person efforts
- In old times, people used to cure sickness by using
 - new technology
 - herbs
 - x -ray imaging
 - radiation
- medical schools were established because the treatments were
 - cheap
 - causing no money
 - causing a lot of money
 - free

Choose the right answer a, b, c, or d

- the underlined word consecutive means:
 - the scientific study of the structure of the body
