

Final MATH - 2014

Form A

1) Solve :- $x^2 - x - 6 = 0$

2) Simplify :- $\frac{12}{x^2 - 9} - \frac{5}{2x - 6}$

3) Simplify :- $\frac{(3x^{-3}y)^{-2}}{(x^2y^{-2})^3}$

4) Find the value a = ??

If you know the points $(4, a)$ and $(1, -1)$
and $(-3, -2)$ on the same line?

5) Graph $2x - y \leq 3$
 $x + 3y > 4$

Best wishes ...
