Marks for the term

- Mobile Telephones are not allowed in the classrooms
- Time allowed is 1 and $1 / 2$ hours
- Attempt all questions
- Choose the nearest number to your answer
* For each question, put the code of the correct answer in the above table under the question number

Q1- The following information has been collected from 75 patients who visited the diabetic clinic in Riyadh:

| Age (years) | Frequency | Relative <br> Frequency | Cumulative <br> Frequency |
| :---: | :---: | :---: | :---: |
| $05-14$ | 6 | 0.08 | 6 |
| $15-24$ | 9 | $\mathbf{X}$ | 15 |
| $25-34$ | $\mathbf{Y}$ | 0.24 | 33 |
| $35-44$ | 24 | 0.32 | 57 |
| $45-54$ | 15 | 0.20 | $\mathbf{Z}$ |
| $55-64$ | 3 | 0.04 | 75 |

1- the value of $\mathbf{X}$ is:
A) 0.12
B) 0.20
C) 9
D) 12

2- the value of $\mathbf{Y}$ is :
A) 0.18
B) 0.20
C) 18
D) 12

3- the value of $\mathbf{Z}$ is :
A) 80
B) 0.20
C) 0.72
D) 72

4- If the ages have mean=35.1 and standard deviation $=12.76$, then the coefficient of variation (C.V) of the ages is :
A) 0.765
B) $36.35 \%$
C) 162.82
D) 12.76

5- the unit of the C.V of age is :
A) Year
B) kg
C) No unit
D) None

6- If the $C . V$ of the patient weight is $27.5 \%$, then:
A) Age has more variability
B) Weight has more variability
C) Both have the same variability
D) None

Q2- If one person is selected randomly from a set of 75 persons which are classified according to three categories of ages and three categories of weights:

|  | Slim (S ) | Normal (N ) | Fat (F ) |  |
| :---: | :---: | :---: | :---: | :---: |
| $(05-24)$ year ( A1 ) | 15 | 10 | 2 | $\mathbf{2 7}$ |
| $(25-44)$ year ( A ) $)$ | 10 | 12 | 3 | $\mathbf{2 5}$ |
| $(45-64)$ year ( A3 ) | 7 | 11 | 5 | $\mathbf{2 3}$ |
|  | $\mathbf{3 2}$ | $\mathbf{3 3}$ | $\mathbf{1 0}$ | $\mathbf{7 5}$ |

7- The probability $P(A 1 \cup N)$ is:
A) $4 / 5$
B) $2 / 3$
C) $2 / 15$
D) 72

8- The probability $P(A 1 \mid N)$ is:
A) $10 / 27$
B) $10 / 75$
C) $10 / 33$
D) None

9- The probability $P(\bar{N})$ is
A) $13 / 75$
B) $12 / 75$
C) $11 / 25$
D) $14 / 25$

10- The events $A 1$ and $N$ are:
A) Independent
B) Dependent
C) Disjoint
D) None

11-The events $S$ and $F$ are:
A) Mutually exclusive (Disjoint)
B) Not Disjoint
C) Independent
D) None

12- The probability $P(S \cup F)$ is:
A) $14 / 25$
B) $2 / 3$
C) $1 / 3$
D) $11 / 25$

Q3- the weights to nearest kg of 7 patients are: $16,10,9,46,15,16,10$ :
13-the median of weight is:
A) 10
B) 15
C) 19.1
D) 46

14- the mean of weight is:
A) 10
B) 15
C) 19.1
D) 17.43

15- this data has:
A) One mode
B) Two modes
C) Three modes
D) No mode

16- for this data, the best of center measure is:
A) The mode
B) The median
C) The mean
D) None

17- The range of this data is:
A) 7
B) -6
C) 6
D) 37

18- The standard deviation of this data is:
A) 167.95
B) 12.96
C) 17.43
D) 12.0

Q4- In order to check the reliability of a given Lab in Riyadh, suppose a sample with diabetic disease ( $D$ ) and another without disease ( $\bar{D}$ ) had the Lab tests and the results are as given below:

|  | Present $(D)$ | Absence $(\bar{D})$ |
| :---: | :---: | :---: |
| Positive $(T)$ | 630 | 15 |
| Negative $(\bar{T})$ | 20 | 335 |

## Use this data to answer the questions:

19- The probability of false positive result is:
A) $3 / 70$
B) $7 / 20$
C) $2 / 65$
D) $7 / 200$

20-The probability of false negative result is:
A) $3 / 70$
B) $7 / 20$
C) $2 / 65$
D) $7 / 200$

21- The sensitivity of the test is:
A) $67 / 70$
B) $3 / 70$
C) $2 / 65$
D) $63 / 65$

22- The specificity of the test is:
A) $67 / 70$
B) $3 / 70$
C) $2 / 65$
D) $63 / 65$

## If the true Diabetic percentage in Riyadh is $\mathbf{2 0 \%}$, then:

23- The predictive value positive of the test is:
A) 0.977
B) 0.85
C) 0.944
D) 0.992

24- The predictive value negative of the test is:
A) 0.977
B) 0.85
C) 0.944
D) 0.992

Test I
Semester I, 1432 - 1433 H

| Student Name: |  |  |  |
| :--- | :--- | :--- | :--- |
| Student Number: |  | Section Number: |  |
| Teacher Name: |  | Attendance <br> Number |  |

- Mobile Telephones are not allowed in the classrooms.
- Time allowed is 90 minutes
- Answer all questions.
- Choose the nearest number to your answer.
- WARNING: Do not copy answers from your neighbours. They have different questions forms.
- For each question, put the code in capital letter of the correct answer, in the following table, beneath the question number:

| $\mathbf{1}$ | $\mathbf{2}$ | $\mathbf{3}$ | $\mathbf{4}$ | $\mathbf{5}$ | $\mathbf{6}$ | $\mathbf{7}$ | $\mathbf{8}$ | $\mathbf{9}$ | $\mathbf{1 0}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| B | C | A | B | D | D | C | B | C | C |

| $\mathbf{1 1}$ | $\mathbf{1 2}$ | $\mathbf{1 3}$ | $\mathbf{1 4}$ | $\mathbf{1 5}$ | $\mathbf{1 6}$ | $\mathbf{1 7}$ | $\mathbf{1 8}$ | $\mathbf{1 9}$ | $\mathbf{2 0}$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| A | A | D | D | B | B | C | A | B | A |

| $\mathbf{2 1}$ | $\mathbf{2 2}$ | $\mathbf{2 3}$ | $\mathbf{2 4}$ | $\mathbf{2 5}$ |
| :---: | :---: | :---: | :---: | :---: |
| C | A | D | D | B |

## QUESTIONS 1-2

From men with age more than 20 years living in Qaseem, we select 200 men. It was found that the average weight of the men was 76 kg .
Q. 1 The variable of interest is:
(A) Age
(B) weight
(C) 200 men
(D) 76 kg
Q. 2 The sample size is:
(A) 76
(B) 20
(C) 200
(D) 1520

## QUESTIONS 3-8

Fill in the table given below. Answer the following questions.

| Class <br> Interval | Frequency | Cumulative <br> Frequency | Relative <br> Frequency | Cumulative <br> Relative <br> Frequency |
| :--- | :---: | :--- | :--- | :--- |
| $5-9$ | 8 |  |  |  |
| $10-14$ | 15 |  | C |  |
| $15-19$ | 11 | B |  | D |
| $20-24$ | A | 40 | 0.15 |  |

Q. 3

The value of A is:

| (A) 6 | (B) 4 | (C) 34 | (D) 40 |
| :--- | :--- | :--- | :--- |

Q. 4

The value of $B$ is:

| (A) 40 | (B) 34 | (C) 0.85 | (D) 0.275 |
| :--- | :--- | :--- | :--- |

Q. 5

The value of C is:

| (A) 23 | (B) 0.575 | (C) 0.275 | (D) 0.375 |
| :--- | :--- | :--- | :--- |

Q. 6

The value of D is:

| (A) 0.375 | (B) 34 | (C) 0.8 | (D) 0.85 |
| :--- | :--- | :--- | :--- |

Q. 7

The true class interval for the first class is:
(A) 5-9
(B) 5-10
(C) $4.5-9.5$
(D) $5.5-9.5$
Q. 8

The percentage of observations less than 19.5 is:

| (A) 34 | (B) 85 | (C) 1 | (D) 6 |
| :--- | :--- | :--- | :--- |

## QUESTIONS 9-14

Temperature (in Faraheniet) recorded at 2 am in London on 8 days randomly chosen in a year were as follows:
$\begin{array}{llllllll}40 & -21 & 38 & -9 & 26 & -21 & -49 & 44\end{array}$
Q. 9 The average temperature for the sample is:

| (A) 248 | (B) 1 | (C) 6 | (D) 48 |
| :--- | :--- | :--- | :--- |

Q. 10 The median temperature for the sample is:

| (A) 17 | (B) -21 | ( C) 8.5 | (D) -8.5 |
| :--- | :--- | :--- | :--- |

Q. 11 The mode of temperature for the sample is:

| (A) -21 | (B) 44 | (C) 2 | (D) -49 |
| :--- | :--- | :--- | :--- |

Q. 12 The standard deviation for the sample data is:

| (A) 35.319 | ( B) 30.904 | (C) 1247.43 | (D) 4 |
| :--- | :--- | :--- | :--- |

Q. 13 The coefficient of variation for the sample is:

| (A) $49 \%$ | (B) $\mathbf{1 7 \%}$ | (C) $4 \%$ | (D) $\mathbf{5 8 8 . 7 \%}$ |
| :--- | :--- | :--- | :--- |

Q. 14 The range of the sample is:

| (A) 4 | (B) 8 | (C) 40 | (D) 93 |
| :--- | :--- | :--- | :--- |

QUESTIONS 15-19

| Gender | Diabetics (D) | Not Diabetic (D ${ }^{\text {c }}$ ) | TOTAL |
| :--- | :---: | :---: | :---: |
| Male (M) | 72 | 288 | 360 |
| Female (F) | 48 | 192 | 240 |
| TOTAL | 120 | 480 | 600 |

Consider the information given in the table above. A person is selected randomly from 600 people.
Q. 15 The probability that the person found is male and diabetic is:

| (A) 72 | (B) 0.12 | (C) 0.60 | (D) 0.67 |
| :--- | :--- | :--- | :--- |

Q. 16 The probability that the person found is male or diabetic is:
(A) 0.12
(B) 0.68
(C) 0.60
(D) 0.97
Q. 17 The probability that the person found is female is:
(A) 0.24
(B) 0.12
(C) 0.40
(D) 0.5
Q. 18 Suppose we know the person found is a male, the probability that he is diabetic, is:

| (A) 0.2 | (B) 0.12 | (C) 0.40 | (D) 0.68 |
| :--- | :--- | :--- | :--- |

Q. 19 The events M and D are:

| (A) Disjoint | (B) Independent | (C) mutually exclusive | (D) Dependent |
| :--- | :--- | :--- | :--- |

## QUESTIONS 20-21

Suppose that $5 \%$ of the people in a population have cancer and $20 \%$ of all the people are poor. Suppose that two events (cancer and being poor) are independent. A person is selected at random from the population.
Q. 20 The probability that the person selected is $r$ poor and has a cancer, is:

| (A) $\mathbf{0 . 0 1}$ | (B) 0.10 | (C) 0.24 | (D) 0.25 |
| :--- | :--- | :--- | :--- |

Q. 21 The probability that the person selected is either poor or has a cancer, is:

| (A) 0.01 | (B) 0.10 | (C) $\mathbf{0 . 2 4}$ | (D) 0.25 |
| :--- | :--- | :--- | :--- |

## OUESTIONS 22-25

It is known that $40 \%$ of the population is diabetic. 330 persons who were diabetics went through a test where the test confirmed the disease for 288 persons. Among 270 healthy persons, test showed high sugar level for 22 persons. The information obtained is given in the table below.

## Answer the following Questions.

| Test | Diabetics $(\mathrm{D})$ | Not Diabetic $\left(\mathrm{D}^{\mathrm{c}}\right)$ | TOTAL |
| :--- | :---: | :---: | :---: |
| Positive $(T)$ | 288 | 72 | 360 |
| Negative $(\bar{T})$ | 42 | 198 | 240 |
| TOTAL | 330 | 270 | 600 |

Q. 22 The sensitivity of the test is:

| (A) 0.873 | (B) 0.480 | (C) 0.733 | (D) 0.33 |
| :--- | :--- | :--- | :--- |

Q. 23 The specificity of the test is:

| (A) 0.873 | (B) 0.330 | (C) 0.48 | (D) 0.733 |
| :--- | :--- | :--- | :--- |

Q. 24 The probability of false positive is:

| (A) 0.1549 | (B) 0.127 | (C) 0.713 | (D) 0.267 |
| :--- | :--- | :--- | :--- |

Q. 25 The predictive probability positive for the disease is:

| (A) 0.686 | (B) 0.800 | (C) 0.480 | (D) 0.873 |
| :--- | :--- | :--- | :--- |

| $\mathbf{2 1}$ | $\mathbf{2 2}$ | $\mathbf{2 3}$ | $\mathbf{2 4}$ |
| :--- | :--- | :--- | :--- |
| C | B | C | A |

Use the following table to answer questions (1-4)

| No. | Classes | Frequency | Percentage Freq \% |
| :---: | :---: | :---: | :---: |
| 1 | $7.5-9.5$ | 1 | 0.61 |
| 2 | $9.5-11.5$ | 1 | 0.61 |
| 3 | $11.5-13.5$ | $x$ | 3.03 |
| 4 | $13.5-15.5$ | 17 | 10.30 |
| 5 | $15.5-17.5$ | 49 | 29.70 |
| 6 | $17.5-19.5$ | 60 | $y$ |
| 7 | $19.5-21.5$ | 27 | 16.36 |
| 8 | $21.5-23.5$ | 5 | 3.03 |
|  | Total | 165 | 100.00 |

1) The value of $x$ is:
A) 3
B) 10
C) 5
D) 8
2) The value of $y$ is:
A) 15.75
B) 36.36
C) 12.55
D) 46.32
3) The mid-class(mid -point) of the second class is:
A) 9.5
B) 10.5
C) 9
D) 8.5
4) The percentage of measurements that are less than 15.5 is:
A) $10.30 \%$
B) $36.36 \%$
C) $14.55 \%$
D) $1.21 \%$

Use the following information to answer questions (5-8)

|  | Exhibit Symptom <br> $D$ | Does not Exhibit <br> Symptom $\bar{D}$ | Total |
| :--- | :--- | :--- | :--- |
| Positive $T$ | 495 | 12 | 507 |
| Negative $\bar{T}$ | 25 | 868 | 893 |
| Total | 520 | 880 | 1400 |

5) The sensitivity of the symptom is
A) 0.952
B) 0.495
C) 0.976
D) 0.356
6) The specificity of the symptom is
A) 0.986
B) 0.148
C) 0.972
D) 0.625
7) Suppose it is known that the rate of the disease in the general population is 0.05 . the predictive value positive of the symptom is
A) 0.05
B) 0.491
C) 0.786
D) 0.986
8) The predictive value negative of the symptom is
A) 0.999
B) 0.954
C) 0.509
D) 0.052

Use the following table to answer questions (9-12)

A random sample of 1000 mothers from some health centre was investigated. The following table cross-tabulates the counts of mothers in the classifications of whether the baby was premature or not and whether the mother admitted to smoking during pregnancy (SMOKE) or not.

|  | Not- Premature | Premature | Total |
| :---: | :---: | :---: | :---: |
| Smoke | 220 | 86 | 306 |
| Not-Smoke | 580 | 114 | 694 |
| Total | 800 | 200 | 1000 |

9) The probability that a mother selected at random in this sample admitted to smoking is
A) 0.220
B) 0.86
C) 0.306
D) 0.275
10) The probability that a mother selected at random in this sample had a premature baby is
A) 0.2
B) 0.86
C) 0.43
D)0.281
11) The probability that a mother in this sample had a premature baby given that the mother admit to smoking is
A) 0.86
B) 0.43
C) 0.200
D) 0.281
12) The probability that a mother selected at random in this sample had a premature baby or that the mother did not admit to smoking is
A) 0.780
B) 0.200
C) 0.694
D) 0.894

Use the following data to answer questions (13-18)
The data below presents the heart rate of seven rat pups from the experiment involving the carotid artery.
$\begin{array}{lllllll}500 & 570 & 560 & 570 & 450 & 560 & 570\end{array}$
13) The mean of this data is:
A) 560
B) 500
C) 540
D) 570
14) The median in this data is:
A) 560
B) 500
C) 540
D) 570
15) The mode of this data is:
A) 550
B) 570
C) 70
D) 120
16) The range of this data is:
A) 550
B) 570
C) 70
D) 120
17) The variance of this data is:
A) 1250
B) 2500
C) 2200
D) 1890
18) The coefficient of variation of this data is:
A) $11.51 \%$
B) $8.69 \%$
C) $4.07 \%$
D) $4.67 \%$
19) A false positive indicates
A) Given the subject has the disease, the test result is positive $(T \mid D)$
B) Given the subject has the disease, the test result is negative $(\bar{T} \mid D)$
C) Given the subject does not have the disease, the test result is positive ( $T \mid \bar{D}$ )
D) Given the subject does not have the disease, the test result is negative ( $\bar{T} \mid \bar{D}$ )
20) If A and B are two mutually exclusive events(disjoint) then
A) $P(A \cap B)=P(A) P(B)$
B) $P(A \mid B)=P(A)$
C) $P(A \cup B)=P(A)+P(B)$
D) $P(A \cup B)=1$
21) If $\mathrm{P}(\mathrm{A})=0.2, \quad \mathrm{P}(\mathrm{B})=0.5$ and $\mathrm{P}(\mathrm{A} \cap \mathrm{B})=0.1$ then $\mathrm{P}(\mathrm{A} \mid \mathrm{B})=$
A) 0.5
B) 0.4
C) 0.2
D) 1.0
22) If the probability of left-handedness in a certain group is 0.07 , the probability of right-handedness (assuming no ambidexterity) is
A) 0.07
B) 0.93
C) 0.00
D) 1.00
23) The probability that a person selected from a population will have the classic symptom of a certain disease is 0.2 , and the probability that a person selected at random has the disease is 0.23 . The probability that a person has the symptom and also has the disease is 0.18 . Given a person selected at random from this population does not have the symptom the probability that the person has the disease is
A) 0.0460
B) 0.0360
C) 0.0625
D) 0.0420
24) Consider the following table for age and smoking habit of 200 teenagers.

| Age <br> group |  | A <br> None <br> Smoker | B <br> Moderate <br> Smoker | C <br> Heavy <br> Smoker |
| :--- | :--- | :--- | :--- | :--- |
| D | $10-12$ | 0 | 40 | 60 |
| E | $15-18$ | 10 | 40 | 50 |

From the above table, we can say that the event A and D are
A) mutually exclusive(disjoint)
B) $\mathrm{A}^{\mathrm{C}}=\mathrm{D}$
C) independent
D) $A=D^{C}$

Following are the weights (in kg ) for a sample of 6 children. $13,20,18,12,15$, and 12.
(1) The mean of the data is:

| A) 12 | B) | 15 | C) | 10 | D) | 18 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(2) The median of the data is:

| A) | 17 | B) | 12 | C) | 10 | D) | $\underline{14}$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(3) The mode of the data is:
A) $\underline{12}$
B) 20
C) 15
D) 2
(4) The variance of the data is:

| A) | 3.347 | B) | 3.055 | C) | $\underline{11.200}$ | D) | 9.333 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(5) The coefficient of variation (C.V.) of the data is:

| A) $22.3 \%$ | B) | $17.4 \%$ | C) | $74.7 \%$ | D) | $62.22 \%$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

Consider the following cumulative frequency distribution table for the ages of all workers in a certain factory.

| Age | Cumulative frequency |
| :--- | :---: |
| $26-35$ | 10 |
| $36-45$ | 40 |
| $46-55$ | 50 |

(10) Percentage of workers in the age group 36-45 is:

| A) | $40 \%$ | B) | $80 \%$ | C) | $30 \%$ | D) | $60 \%$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(11) Number of workers having age 36 or more is:

| A) | 90 | B) | $\underline{40}$ | C) | 10 | D) | 50 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(12) The true class limits for the first class are:

| A) | $26-35$ | B) | $21.5-35.5$ | C) | $25.5-34.5$ | D) | $\underline{25.5-35.5}$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

Let $A$ and $B$ be two independent events. Suppose that $P(A)=0.6$ and $P(B)=0.3$ then
(13) $P(\bar{A} \cap B)$ equals:

| A) | 0.08 | B) | $\underline{0.12}$ | C) | 0.20 | D) | 0.42 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(14) $P(A \cup B)$ equals:
A) $\underline{0.72}$
B) 0.90
C) 0.10
D) 0.7
>>>
Suppose that a town has $20 \%$ of men known to have a certain disease. A certain medical test is applied to randomly selected 500 men. The following data is obtained.

|  | Disease |  |  |
| :--- | :---: | :---: | :---: |
| Test | Present | Absent | Total |
| Positive | $\mathbf{8 2}$ | $\mathbf{8 0}$ | $\mathbf{1 6 2}$ |
| Negative | $\mathbf{3 8}$ | $\mathbf{3 0 0}$ | $\mathbf{3 3 8}$ |
| Total | $\mathbf{1 2 0}$ | $\mathbf{3 8 0}$ | $\mathbf{5 0 0}$ |

Let an individual be selected at random from the sample.
(15) The probability that the selected person has the disease is:
A) 0.20
B) $\underline{0.24}$
C) 0.68
D) 0.32
(16) The probability that the test gives a false negative result is:

| A) | $\underline{0.32}$ | B) | 0.68 | C) | 0.21 | D) | 0.79 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(17) The sensitivity of the test is:

| A) | $\underline{0.68}$ | B) | 0.16 | C) | 0.51 | D) | 0.79 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(18) Suppose that $20 \%$ of men in the town have the disease, the predictive probability negative for the test is:

| A) | 0.37 | B) | $\underline{0.62}$ | C) | 0.09 | D) | 0.89 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

A researcher wishes to determine if vitamin $E$ supplements could increase cognitive ability among elderly women. In 1999 the researcher recruits a sample of elderly women age 7580. At the time of the enrollment into the study, the women were randomized to either take Vitamin $E$, or a placebo for six months. At the end of the six month period, the women were given a cognition test. Higher scores on this test indicate better cognition. The mean of the test scores of 81 women who took vitamin $E$ supplements was $\bar{X}_{1}=27$, while the mean of the test scores of the 90 women who took placebo supplements was $\bar{X}_{2}=24$ Assuming the two populations follow approximately two different normal distributions with standard deviations, $\sigma_{1}=6.9$ and , $\sigma_{2}=6.2$, respectively.
(35) The point estimate for the difference between the two population means $\left(\mu_{1}-\mu_{2}\right)$ :

| A) 27 | B) | 24 | C) | 6.2 | D) | $\underline{3}$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(36) The standard error for the difference between the two sample means $\left(\bar{X}_{1}-\bar{X}_{2}\right)$ :

| A) | 6.9 | B) | 6.2 | C) | $\underline{1.007}$ | D) | 3 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(37) A lower limit of a $95 \%$ C.I. for the difference between the two population means $\left(\mu_{1}-\mu_{2}\right):$

| A) | $\underline{1.0263}$ | B) | 4.9745 | C) | 5.9120 | D) |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |

Six healthy three year old female sheep were injected with the antibiotic Gentamicin, at a dosage of $10 \mathrm{mg} / \mathrm{kg}$ body weight. Their blood serum concentrations ( $\mathrm{mg} / \mathrm{ml}$ ) of Gentamicin after injection were $33 ; 26 ; 34 ; 31 ; 23 ; 25$, the summary statistics for these data are

| $n$ | mean | Standard <br> deviation | SE(mean) |
| :---: | :---: | :---: | :---: |
| 6 | 28.67 | 4.59 | 1.87 |

Assuming the data follows approximately a normal distribution,
(38) The standard error of the sample mean is equal to:

| A) | 0.25 | B) | 1.87 | C) | 4.59 | D) | 28.67 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(39) At the $90 \%$, the ratability coefficient is equal to:

| A) | 2.33 | B) | $\underline{2.015}$ | C) | 3.215 | D) | 1.96 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(40) The $90 \%$ confidence interval for the population mean score on this test is:

| A) | $(27.412,30.145)$ | B) | $(24.48,29.10)$ | C) | $(24.902,32.438)$ | D) | $(32.48,39.55)$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(41) The test statistic for testing the hypotheses $H_{0}: \mu=30 v s H_{1}: \mu<30$ is equal to:

| A) | -2.2587 | B) | 2.5812 | C) | $\underline{-0.7112}$ | D) | 3.3412 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(42) At the 5\% significance level the critical region is :
A) $(-\infty,-2.015)$
B) $(-2.015,2.015)$
C) $(2.015, \infty)$
D) $(2.58, \infty)$
(43) At the 5\% significance level we are able to :

| A) | Reject $H_{0}$ | B) | Not to reject |
| :--- | :--- | :--- | :--- | :--- | :--- |
| $H_{0}$ | C) | Decision is not possible |  |

>>>
A biostatistician , found that among 2000 boys ages 7 to 12 years. 400 were overweight. On the basis of this study:
(44) The standard error of the sample proportion of the overweight boys ages 7 to 12 years is:

| A) | 0.0500 | B) | $\underline{0.0089}$ | C) | 0.6587 | D) | 0.0221 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(45) The $99 \%$ upper confidence limit for the population proportion of the overweight boys ages 7 to12 years is:

| A) | 0.5000 | B) | $\underline{0.223}$ | C) | 0.6587 | D) | 0.0221 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(46) The test statistic for testing the hypotheses the proportion of boys ages 7 to 12 year does not equal 18 is:

| A) | -2.2587 | B) | $\underline{2.33}$ | C) | -0.7112 | D) | 3.3412 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(47) At the $5 \%$ significance level, can we conclude that more than $18 \%$ of boys ages 7 to 12 years are overweight:

| A) Yes | B) | No | C) | Decision is not possible |
| :--- | :--- | :--- | :--- | :--- |

>>>
A sample of 25 freshman nursing students made a mean score of $77.0 n$ a test designed to measure the attitude toward the dying patient. The sample standard deviation was 10. Assuming the data comes from a normal population,
(48) The statistical hypothesis for testing the hypothesis that the mean score is different than 80 is:

| A) | $H_{0}: \mu=80$ vs $H_{1}: \mu \neq 80$ | B) | $H_{0}: \mu=80$ vs $H_{1}: \mu<80$ |
| :--- | :--- | :--- | :--- |
| C) | $H_{0}: \mu=80$ vs $H_{1}: \mu>80$ | D) | $H_{0}: \mu=77$ vs $H_{1}: \mu<77$ |

(49) The test statistic for these statistical hypothesis is:

| A) -1.500 | B) | -2.025 | C) | 3.258 | D) | 0 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(50) At the 5\% significance level we are able to :

| A) | Reject $H_{0}$ | B) | Not to reject $H_{0}$ | C) | Decision is not possible |

$>$ Let X be the number of serious cases accepted in an emergency Hospital section in one hour. The probability distribution of $X$ is as follows:

| $\mathbf{x}$ | $\mathbf{0}$ | $\mathbf{1}$ | $\mathbf{2}$ | $\mathbf{3}$ |
| :--- | :--- | :--- | :--- | :--- |
| $\mathbf{P}(\mathbf{X}=\mathbf{x})$ | 0.3 | 0.5 | $\mathbf{0 . 1 5}$ | $\mathbf{k}$ |

1. The value of k is:
(A) 0
(B) 0.05
(C) 0.5
(D) 1
2. The probability that $P(X \leq 1)$ is:
(A) 0.2
(B) 0.5
(C) 0.8
(D) $2 / 3$

## You are given the following Data: 9.5, 9, 8, 7, 8.5, and 10

3. The best measure of center is:
(A) the mean $\quad(\mathrm{B})$ the median
(C) the variance
(D) the mode
4. The mean of the data is:
(A) 8.67
(B) 8
(C) 52
(D) 6
5. The median of the data is:
(A) 8.67
(B) 8.75
(C) 7.5
(D) no median
6. The variance of the data is:
(A) 1.08
(B) 0.97
(C) 1.17
(D) 0.99
7. The coefficient of variation for the data is:
(A) 3.4
(B) 7.41
(C) 0.135
(D) 1.17
$>$ The following table gives the classification of a group of 350 patients according to sex (M or F) and whether or not a person has a Coronary heart disease ( $C$ ):

| Disease | $M$ | $F$ | Total |
| :---: | :--- | :--- | :--- |
| $C$ | 150 | 80 | $\mathbf{2 3 0}$ |
| $\bar{C}$ | 50 | 70 | $\mathbf{1 2 0}$ |
| Total | $\mathbf{2 0 0}$ | $\mathbf{1 5 0}$ | $\mathbf{3 5 0}$ |

8. The event $\bar{C}$ and $F$ are :
(A)Independent (B) Dependent
(C) Disjoint
(D) Mutually Exclusive
9. The probability of either $\bar{C}$ or $F$ is:
(A) 0.13
(B) 0.57
(C) 0.77
(D) 0.20
$>$ The following table shows the results of a screening test evaluation in which a random sample of $\mathbf{8 0 0}$ subjects with disease and an independent sample of $\mathbf{1 3 0 0}$ subjects without the disease participated:

| Test results | Present $(D)$ | Absence $(\bar{D})$ | Total |
| :--- | :---: | :---: | :---: |
| Positive $(T)$ | 710 | 50 | $\mathbf{7 6 0}$ |
| Negative $(\bar{T})$ | 90 | 1250 | $\mathbf{1 3 4 0}$ |
| Total | $\mathbf{8 0 0}$ | $\mathbf{1 3 0 0}$ | $\mathbf{2 1 0 0}$ |

10. The probability of false positive result is:
(A) $25 / 26$
(B) $71 / 80$
(C) $1 / 26$
(D) $9 / 80$
11. The sensitivity of the test is:
(A) $1 / 26$
(B) $9 / 80$
(C) $25 / 26$
(D) $71 / 80$
12. The specificity of the test is:
(A) $1 / 26$
(B) $9 / 80$
(C) $25 / 26$
(D) $71 / 80$

If the true probability of the disease is 0.1 then:
13. The predictive value negative of the test is:
(A) 0.85
(B) 0.72
(C) 0.99
(D) 0.90
$>$ A clinic used to receive some cancer patients with mean 2.5 cases every week. Suppose that the number of cases received every week follow Poisson distribution, then
14. The probability that the clinic will receive next week more than one cancer patient is:
(A) 0.287
(B) 0.205
(C) 0.795
(D) 0.713
15. The probability that the clinic will receive next month (Assume one month $=4$ weeks) exactly 5 cancer patients is:
(A) 0.050
(B) 0.7356
(C) 0.094
(D) 0.038
16. The average number of cancer patients received in one month (Assume one month $=4$ weeks) is:
(A) 2.5
(B) 10
(C) 5
(D) 30
$>$ Suppose that a group of $\mathbf{1 0}$ patients visit a certain Diabetic clinic. If it is known that $\mathbf{2 5 \%}$ of persons visiting the clinic are Diabetic, then:
17. The probability that there will be, in the group, three Diabetic patients is:
(A) 0.30
(B) $\underline{0.25}$
(C) 0.75
(D) 0.7
18. The probability that there will be at least one Diabetic patient is:
(A) 0.944
(B) 0.056
(C) 0.1
(D) 0.9
19. The expected number of Diabetic patients in the group is:
(A) 7
(B) 5
(C) 2.5
(D)) 3
20. The Variance of the number of Diabetic patients in the group is:
(A) 1.675
(B) 2.5
(C) 4
(D) 6

A random variable has a normal distribution with mean $\mu=50$ and standard deviation $\sigma=$ 5.2. The probability that the random variable will take a value:
21. less than 55.2 is:
(A) 0.2649
(B) 0.7538
(C) 0.8413
(D) 0.8909
22. greater than 60.3 is:

| (A) 0.1 | (B) 0.5 | (C) 0.4 | (D) $\mathbf{0 . 0 2}$ |
| :--- | :--- | :--- | :--- |

$>$ The heights of a random sample of 50 college students showed a mean of 174.5 centimeters and a standard deviation of 6.9 centimeters.
23. The lower bound of $98 \%$ confidence interval for the mean height of all college students is:

| (A) $\mathbf{1 7 2 . 2 3}$ | (B) 174.5 | (C) 176.77 | (D) 167.60 |
| :--- | :--- | :--- | :--- |

24. The upper bound of $98 \%$ confidence interval for the mean height of all college students is:

| (A) 0.5524 | (B) 167.60 | (C) 172.23 | (D) 176.77 |
| :--- | :--- | :--- | :--- |

A new-rocket-launching system is being considered for development of small, short-range rockets. The existing system has $P=0.8$ as the probability of a successful launch. A sample of 40 experimental launches is made with the new system out of which 34 are successful. Let $P$ be the proportion of successful launches under the new system.
25. A lower bound of $95 \%$ confidence interval for $P$, is:

| (A) $\mathbf{0 . 7 3 9}$ | (B) 0.800 | (C) 0.761 | (D) 0.250 |
| :--- | :--- | :--- | :--- |

26. An upper bound of $95 \%$ confidence interval for $P$, is:

| (A) 0.961 | (B) 0.750 | (C) 0.009 | (D) 0.893 |
| :--- | :--- | :--- | :--- |

27. On testing that whether the new system is better, the test statistic value is:

| (A) 1.960 | (B) 0.791 | (C) 1.645 | (D) O.W |
| :--- | :--- | :--- | :--- |

$>$ A random sample of size $n_{1}=25$, taken from a normal population with a standard deviation $\sigma_{1}=5.2$, has a mean $\bar{X}_{1}=81$. A second random sample of size $\boldsymbol{n}_{2}=36$, taken from a different normal population with standard deviation $\sigma_{2}=3.4$, has a mean $\bar{x}_{2}=76$. On testing the hypothesis, at the 0.01 level of significance, that $\mu_{1}=\mu_{2}$ against the alternative $\mu_{1} \neq \mu_{2}$, consider the following questions:
28. The probability distribution used for performing the test is:
(A) $\mathbf{N}(\mathbf{0}, \mathbf{1})$
(B) Normal
(C) t-distributior (D) O.W
29. The test is:

| (A) one-sided to left | (B) two-sided | (C) one-sided to right | (D) O.W |
| :--- | :--- | :--- | :--- |

30. The critical value (the reliability coefficient) for that test is:

| (A) 1.56 | (B) 2.58 | (C) 1.96 | (D) 2.575 |
| :--- | :--- | :--- | :--- |

31. The value of the test statistic is:

| (A) 4.22 | (B) 2.05 | (C) 2.24 | (D) 22.40 |
| :--- | :--- | :--- | :--- |

32. The decision is:

| (A) reject $\mathrm{H}_{\mathbf{0}}$ | (B) reject $\mathrm{H}_{1}$ | (C) accept $\mathrm{H}_{0}$ and $\mathrm{H}_{1}$ | (D) O.W |
| :--- | :--- | :--- | :--- |

> Assume that the mean life of a machine is $\mathbf{6}$ years with a standard deviation of 1 year. Suppose that the life of such machines follows approximately a normal distribution. If a random sample of 4 is selected from these machines, then:
33. The probability distribution of a sample mean is called a :

| (A)Standard <br> error | (B)Random <br> sampling | (C)Sampling <br> distribution | (D) Standard <br> deviation |
| :--- | :--- | :--- | :--- |

34. The sample mean $\bar{x}$ has a standard deviation equals to:

| (A) 0.79 | (B) 0.70 | (C) 0.50 | (D) 0.25 |
| :--- | :--- | :--- | :--- |

35. If $P(\bar{X}>b)=0.1492$, then the value of $b$ is:

| (A) 0.85 | (B) .20 | (C) 1.04 | (D) 6.52 |
| :--- | :--- | :--- | :--- |

Suppose that $7 \%$ of the pieces from a production process $A$ are defective while that proportion of defective for another production process $B$ is $5 \%$. A random sample of size 400 pieces is taken from the production process A while the sample size taken from the production process $B$ is 300 pieces. If $\hat{P}_{1}$ and $\hat{P}_{2}$ be the proportions of defective pieces in the two samples, respectively, then:
36. The sampling distribution of $\hat{P}_{1}-\hat{P}_{2}$ is:

| (A) $\mathrm{N}(0,1)$ | (B) Normal | (C) T | (D) unknown |
| :--- | :--- | :--- | :--- |

37. The value of the standard error of the difference $\left(\hat{P}_{1}-\hat{P}_{2}\right)$ is:

| (A) 0.02 | (B) 0.10 | (C) 0 | (D) 0.22 |
| :--- | :--- | :--- | :--- |

> A random sample of $\mathbf{3 5}$ students in a certain university resulted in the sample proportion of smokers $\hat{p}=0.15$. Then:
38. The point estimate of $p$ is:

| (A) 0.35 | (B) 0.85 | (C) $\mathbf{0 . 1 5}$ | (D) 0.80 |
| :--- | :--- | :--- | :--- |

39. The standard deviation of $\hat{p}$ is:

| (A) 0.3214 | (B) .0036 | (C) 0.1275 | (D) $\mathbf{0 . 0 6 0 4}$ |
| :--- | :--- | :--- | :--- |

$>$ The following are the average weekly losses of worker-hours due to accidents in 10 industrial plants before and after a certain safety program was put into operation:

| 45 and 36 | 73 and 60 | 46 and 44 | 124 and 119 | 33 and 35, |
| :--- | :--- | :--- | :--- | :--- |
| 57 and 51 | 83 and 77 | 34 and 29 | 26 and 24 | 17 and 11 |

On testing whether the safety program is effective, consider the following questions using the $\mathbf{0 . 0 5}$ level of significance: (Hint: $\bar{\chi}_{\mathrm{d}}=5.2$ and $\mathrm{s}_{\boldsymbol{d}}=4.08$ )
40. The computed value of the test statistic is:
(A) 4.08
(B) 5.2
(C) 1.383
(D) 4.03
41. The critical value of the test is:

| (A) $\mathbf{1 . 8 3 3}$ | (B) 1.813 | (C) 2.262 | (D) 2.821 |
| :--- | :--- | :--- | :--- |

42. The decision is:
(A) reject $\mathrm{H}_{1}$
(B) reject $\mathbf{H}_{\mathbf{0}}$
(C) accept $\mathrm{H}_{0}$ and $\mathrm{H}_{1} \mid$ (D) O.W
> One production process yielded 28 defective pieces in a random sample of size 400 while another yielded 15 defective pieces in a random sample of size 300. On testing the null hypothesis $P_{1}=P_{2}$ (that the two process yield equal proportions of defectives) against alternative hypothesis $P_{1} \neq P_{2}$, consider the following questions using the $\mathbf{0 . 0 5}$ level of significance:
43. The test statistic value is:

| (A) 1.10 | (B) 1.96 | (C) 0.061 | (D) 2.58 |
| :--- | :--- | :--- | :--- |

44. The value from the table is:

| (A) 1.65 | (B) 2.33 | (C) 2.58 | (D) $\mathbf{1 . 9 6}$ |
| :--- | :--- | :--- | :--- |

45. The decision is:

| (A) accept $\mathrm{H}_{1}$ | (B) accept $\mathrm{H}_{\mathbf{0}}$ | (C) reject $\mathrm{H}_{0}$ and $\mathrm{H}_{1}$ | (D) O.W |
| :--- | :--- | :--- | :--- |

## QUESTION 1-4:

The probability that a certain X-ray machine produces a defective X-ray is 0.20 . Six X-rays are selected at random from a number of X -rays produced by the X -ray machine. Let Y denote the number of defective X-rays from the sample.
(1) $\mathrm{P}(\mathrm{Y} \leq 1)$ is:

| (A) | 0.8011 | (B) | 0.9011 | (C) | $\mathbf{0 . 6 5 5 3}$ | (D) | 0.2621 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(2) $\mathrm{P}(\mathrm{Y}>1)$ is:

| (A) | 0.8011 | (B) | $\mathbf{0 . 3 4 4 7}$ | (C) | 0.6553 | (D) | 0.3932 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(3) The expected number of the defective X-rays is:

| (A) | $\mathbf{1 . 2}$ |
| :--- | :--- |

(B) 1
(C) 2
(D) 6
(4) The standard deviation of the defective X-rays is:

| $(\mathrm{A})$ | 3 | (B) | $\mathbf{0 . 9 8}$ | (C) | 0.2 | (D) | 0.96 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

## QUESTION 5-7:

Suppose that the human breaths per minute $X$ for adult are normally distributed with mean 16 and standard derivation 4 . If an adult is chosen at random, the probability that $X$ will be
(5) less than 20 is:

| (A) | 0.2547 | (B) | 0.1587 | (C) | 0.2488 | (D) | $\mathbf{0 . 8 4 1 3}$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(6) at least 18 is:

| (A) | 0.2547 | (B) | 0.987 | (C) | $\mathbf{0 . 3 0 8 5}$ | (D) | 0.6915 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(7) between 12 and 17 is:

| (A) | 0.1600 | (B) | $\mathbf{0 . 4 4 0 0}$ | (C) | 0.5000 | (D) | 0.5900 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

## QUESTION 8-11:

Suppose that the mean number $X$ of cases visiting the emergency clinic (E-clinic) at KKUH is four cases per hour. By assuming Poisson distribution, then
(8) $\mathrm{P}(X>1)$ is:

| $(\mathrm{A})$ | 0.2149 | (B) | 0.0916 | (C) | 0.2158 | (D) | $\mathbf{0 . 9 0 8 4}$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(9) $P(1 \leq X<3)$ is:

| $(\mathrm{A})$ | 0.587 | $(\mathrm{~B})$ | 0.2789 | $(\mathrm{C})$ | $\mathbf{0 . 2 1 9 8}$ | (D) | 0.7802 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(10) The standard deviation of the number of cases visiting the E-clinic is:

| (A) | 1.521 | (B) | $\mathbf{2}$ | (C) | 3 | (D) | 4 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(11) The expected number of cases visiting the E-clinic in 6 hours is:

| (A) | 4 | (B) | $\mathbf{2 4}$ | (C) | 10 | (D) | 12 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

## QUESTION 12-15:

The following table classified 500 persons according to Thrombosis and smoking habit.

|  | Smoking Group |  |
| :--- | :--- | :--- |
|  | Smoking $(S)$ | Non-smoking $\left(S^{c}\right)$ |
| Thrombosis $(T)$ | 5 | 4 |
| Non thrombosis $\left(T^{c}\right)$ | 145 | 346 |

(12) The probability that a patient selected randomly has a thrombosis and is smoker, is:

| (A) | 0.05 | (B) | 0.10 | (C) | $\mathbf{0 . 0 1}$ | (D) | 0.50 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(13) The probability that the patient has a thrombosis is:

| (A) | 0.500 |
| :--- | :--- |

(B) 0.444
(C) 0.556
(D) $\mathbf{0 . 0 1 8}$
(14) The probability that the patient has a thrombosis given that he does not smoke is:

| (A) | 0.0080 | (B) | $\mathbf{0 . 0 1 1 4}$ | (C) | 0.7000 | (D) | 0.692 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(15) The probability that a patient selected randomly has a thrombosis or is smoker is:

| (A) | 0.318 | (B) | 0.108 | (C) | 0.103 | (D) | $\mathbf{0 . 3 0 8}$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

## QUESTION 16-18:

The following table shows the results of a screening test evaluation in which a random sample of 325 subjects with the disease and an independent random sample of 600 subjects without the disease participated:

| Test results | Disease |  |
| :--- | :--- | :--- |
|  | Present | Absent |
| Positive | 245 | 35 |
| Negative | 80 | 565 |

(16) The specificity value of the test is:

| (A) | 0.0619 | (B) | $\mathbf{0 . 9 4 1 7}$ | (C) | 0.6108 | (D) | 0.0583 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(17) The sensitivity value of the test is:

| (A) | $\mathbf{0 . 7 5 3 8}$ | (B) | 0.8750 | (C) | 0.4083 | (D) | 0.2462 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(18) Assuming the rate of the disease in the general population is 0.001 , the predictive value positive of the test is:

| (A) | 0.9282 | (B) | 0.9872 | (C) | $\mathbf{0 . 0 1 2 8}$ | (D) | 0.0252 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

## QUESTION 19-25:

Consider the following data set: $10,7,7,10,7,6,5,6,5$
Then,
(19) The mode value is:

| (A) 10 | (B) | 7 | (C) 6 | (D) | 5 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(20) The median value is:

| (A) | 9 | (B) | 6 | (C) | 5 | (D) | 7 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(21) The range value is:

| (A) | 4 | (B) | $\mathbf{5}$ | (C) | 10 | (D) |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(22) The standard deviation value is:

| (A) | 1.928 | (B) | 2.987 | (C) | $\mathbf{1 . 8 7 1}$ | (D) | 3.500 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(23) The coefficient of variation value is:

| (A) | $2 \%$ | (B) | $374 \%$ | (C) | $50 \%$ | (D) | $\mathbf{2 7} \%$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(24) The sample size is:

| (A) | 4 | (B) | 7 | (C) | 9 | (D) |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(25) The mean value is:

| $(\mathrm{A})$ | 6 | (B) 6.5 | $(\mathrm{C})$ | 7 | (D) | 7.5 |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

## QUESTION 26-30:

A simple random sample of size 10 is drawn from a normal population. The sample resulted in $\bar{x}=5.2$ and $\mathrm{S}=4.08$.
(26) The point estimate of the population mean is:

| (A) | 10 | (B) | 4.08 | (C) | $\mathbf{5 . 2}$ | (D) |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(27) The standard deviation of the point estimate of the population mean is:

| (A) | 10 | (B) 4.08 | (C) 5.2 | (D) | $\mathbf{1 . 2 9}$ |
| :--- | :--- | :--- | :--- | :--- | :--- | :--- | :--- |

(28) The computed value of the test statistic for testing $\mathrm{H}_{0}: \mu=3$ against $\mathrm{H}_{1}: \mu>3$ is:
(A) 4.08
(B) 1.96
(C) 1.29
(D) 1.71
(29) Suppose $\alpha=0.05$, then the critical value of the test is:

| (A) 1.833 | (B) 1.96 | (C) 2.262 | (D) 1.645 |
| :--- | :--- | :--- | :--- |

(30) The decision is:
(A)
accept $\mathrm{H}_{0}$
(B) reject $\mathrm{H}_{0}$
(C) accept $\mathrm{H}_{0}$ and $\mathrm{H}_{1}$
(D) reject $\mathrm{H}_{0}$ and $\mathrm{H}_{1}$

## QUESTION 31:

Suppose that a large sample of size $n$ is taken from a non-normal population with mean $\mu$ and variance $\sigma^{2}$.
(31) The distribution of the sample mean $\bar{x}$ will be:

| (A) Normal with mean <br> $\boldsymbol{\mu}$ and variance $\boldsymbol{\sigma}^{2} / \mathbf{n}$ | (B) Normal with mean $\boldsymbol{\mu}$ <br> and variance $\sigma^{2}$ | (C) Standard normal |
| :--- | :--- | :--- |

## QUESTIONS 32-34:

In a simple random sample of size 36 drawn from a population with a mean of 100 and a standard deviation of 36 ,
(32) the probability that the sample mean will be less than 91 is:

| (A) 0.1549 | (B) 0.0753 | (C) $\mathbf{0 . 0 6 6 8}$ | (D) 0.0875 |
| :--- | :--- | :--- | :--- |

(33) the probability that the sample mean will be more than 98 is:
(A) 0.5468
(B) 0.6293
(C) 0.8527
(D) 0.7169
(34) the probability that the sample mean will be between 95 and 105 is:
(A) 0.5934
(B) 0.6174
(C) 0.8432
(D) 0.7647

## QUESTIONS 35-37

In a study on obesity, a sample of 950 adult Saudi women in the Western Region seeking care at primary health centers was taken. It was found that 611 of these were obese. We wish to construct a $99 \%$ confidence interval for the true proportion of adult Saudi women in the Western Region seeking care at primary health centers who are obese.
(35) The standard error estimate of sample proportion is:
(A) 2.58
(B) 0.480
(C) 0.230
(D) 0.016
(36) The $99 \%$ confidence interval for the true proportion is:

| (A) $\mathbf{0 . 6 4 3} \pm \mathbf{0 . 0 4}$ | (B) $0.643 \pm 0.031$ | (C) $0.643 \pm 0.016$ | (D) $0.643 \pm 0.026$ |
| :--- | :--- | :--- | :--- |

(37) The width of the $99 \%$ confidence interval for the true proportion is:
(A) 0.082
(B) 0.031
(C) 0.041
(D) 0.643

## QUESTIONS 38-41:

A random sample of size $n_{1}=25$, taken from a normal population with a standard deviation $\sigma_{1}=5.2$, has a mean $\bar{x}_{1}=81$. A second random sample of size $n_{2}=36$, taken from a different normal population with standard deviation $\sigma_{2}=3.4$, has a mean $\bar{x}_{2}=76$. On testing the hypothesis, at the 0.01 level of significance, that $\mu_{1}=\mu_{2}$ against the alternative $\mu_{1} \neq \mu_{2}$, consider the following questions:
(38) The test is:

| (A) one-sided to left | (B) two-sided | (C) one-sided to right | (D) O.W |
| :--- | :--- | :--- | :--- |

(39) The critical value (the reliability coefficient) for that test is:

| (A) 1.56 | (B) 1.58 | (C) 1.96 | (D) 2.575 |
| :--- | :--- | :--- | :--- |

(40) The value of the test statistic is:
(A) 4.22
(B) 2.05
(C) 2.24
(D) 22.40
(41) The decision is:
(A) reject $\mathbf{H}_{\mathbf{0}}$
(B) reject $\mathrm{H}_{1}$
(C) accept $\mathrm{H}_{0}$ and $\mathrm{H}_{1}$
(D) O.W

## QUESTIONS 42-46:

The Blood glucose level of patients who attend Clinic A and Clinic B are normally distributed with means $\mu_{A}, \mu_{B}$ and standard deviations $\sigma_{A}=9, \sigma_{B}=6$. Two samples of sizes $n_{A}=9, n_{B}=16$ patients have given $\bar{X}_{A}=100, \quad \bar{X}_{B}=95$ then:
(42) The upper limit of $90 \%$ Confidence Interval for $\mu_{A}-\mu_{B}$ is

| (A) 6.6 | (B) 11.6 | (C) $\mathbf{1 0 . 5}$ | (D) 5.6 |
| :--- | :--- | :--- | :--- |

(43) The lower limit of $90 \%$ Confidence Interval for $\mu_{A}$ is

| (A) 0.86 | (B) 90.05 | (C) 104.935 | (D) 95.065 |
| :--- | :--- | :--- | :--- |

Suppose we want to test for the Blood glucose level of patients described above, $H_{0}: \mu_{A}=\mu_{B}$ against $H_{A}: \mu_{A} \neq \mu_{B}$ with $\alpha=0.1$ then:
(44) The suitable test statistic is:

| (A) $\mathrm{z}=-1.111$ | (B) $\mathrm{z}=\mathbf{1 . 4 9 1}$ | (C) $\mathrm{t}=-1.043$ | (D) $\mathrm{z}=3.5$ |
| :--- | :--- | :--- | :--- |

(45) The non rejection (acceptance) region of $H_{0}$ is equal to:

| (A) $(-1.65, ~ 1.65)$ | (B) $(-1.96,1.96)$ | (C) $(-\infty,-1.96)$ | (D) $(-\infty,-1.65)$ |
| :--- | :--- | :--- | :--- |

(46) The decision is:

| (A) Reject $H_{0}$ | (B)Don't reject $H_{0}$ | (C) Decision is not possible |
| :--- | :--- | :--- |

## QUESTIONS 47-48:

Suppose that $P_{A}, P_{B}$ are proportions of patients who attend Clinic A and Clinic B who have low blood glucose level. Two samples of sizes $n_{A}=100, n_{B}=122$ patients have given the sample proportions $\hat{p}_{A}=0.15, \quad \hat{p}_{B}=0.11$.
(47) The upper limit of the $95 \%$ Confidence Interval for $P_{A}-P_{B}$ is

| (A) 95 | (B) 0.04 | (C) $\mathbf{0 . 1 2 9}$ | (D) 0.115 |
| :--- | :--- | :--- | :--- |

(48) To test $H_{0}: P_{A}=0.17 ; H_{A}: P_{A} \neq 0.17$, the value of the test statistic is:

| (A) $\mathbf{z}=\mathbf{- 0 . 5 3 2}$ | (B) $\mathrm{z}=5.6$ | (C) $\mathrm{t}=-1.06$ | (D) $\mathrm{z}=3.5$ |
| :--- | :--- | :--- | :--- |

## QUESTIONS 49-50:

A simple random sample of $\mathrm{n}=6$ from a normally distributed population gave the observations: $0.90,0.97,1.03,1.10,1.04,1.00$.
For the above data, the mean is 1.007 and the standard deviation is 0.068 .
(49) A 95 percent confidence interval for the population mean is:

| (A)(1.123, 1.354) | (B) $(0.939,1.075)$ | (C) $(0.753, .895)$ | (D) (0.936, 1.078) |
| :--- | :--- | :--- | :--- |

(50) The reliability factor for a confidence interval based on $99 \%$ confidence level and sample size of 8 and when population variance is not known, is:

| (A) 3.3554 | (B) 2.998 | (C) 1.8946 | (D) 3.4995 |
| :--- | :--- | :--- | :--- |
