C

...experience unique. Next month, we will make a change so that we can really stand out and introduce touch-screen ordering which is also known as "digital dining." As an employee, you need to know about this new technology.

This is how touch-screen ordering works. Each table will have its own touch-screen computer. Customers can view the menu on the screen, including descriptions and photos. To start, the customer inserts his credit card and puts in his order by touching the screen. Then the program automatically makes suggestions for additional items to order, such as appetizers and drinks. When the customer is ready, he pushes a button to send the order directly to the computer in the kitchen. Won't that make your job as a server easier? All

...will automatically suggest additional items to order. Research shows that when this happens, customers order more. We estimate that customer bills will be 15 to 20 percent higher. With more customers ordering more items, you will earn more money in tips. In addition, you won't have to repeat the same information over and over like a robot. Finally, customers can't blame you for errors in their order—they place their orders themselves! Won't that be nice?

Q: Will customers really want to do their own ordering?
A: Yes, I think that most of our customers will love it! If a guest prefers the traditional service, we will provide it. But these monitors will be so much fun

Question 3 :
Which of the following statements from the memo is an OPINION?

- But these monitors will be so much fun that everyone will love them! (Paragraph 5)
