

# Chapter 5: Discrete Probability Distributions

© STAT 110 Team 2018

# Part 1: Calculations using MS Excel only.

# 5 - 2 Mean, Variance, Standard Deviation, and Expectation

► Example 5-11, page 269:

X	0	1	2	3	4
P(X)	0.18	0.34	0.23	0.21	0.04

► Calculate the mean, variance, and standard deviation from the above discrete probability distribution.

**IMPORTANT NOTE:**

Symbols like ( $^2$ ,  $\mu$ ,  $\sigma$ ) are provided here just for illustration. No need to input them anywhere.

2. For each value of X, input the corresponding probability in column B.

1. Input the values of the discrete random variable X column A.

3. In the first rows of columns C and D, add any notation that denotes  $X * P(X)$  and  $X^2 * P(X)$

(Optional step). Choose three different locations to display the values of the mean, the variance and the standard deviation.

B7

	A	B	C	D	E	F	G	H	I	J
1	X	P(X)	$X * P(X)$	$X^2 * P(X)$		Mean ( $\mu$ ) =				
2	0	0.18				Variance ( $\sigma^2$ ) =				
3	1	0.34				Standard deviation ( $\sigma$ ) =				
4	2	0.23								
5	3	0.21								
6	4	0.04								
7	SUM

Example 5-11

Highlight cells C2 and D2 as follows:

Move the pointer to the green square as shown above. The pointer should change to the shape +. Use the new shape to drag down the highlight to row number 6 to auto-calculate all X \* P(X) and X<sup>2</sup> \* P(X).

B7

1. In cell B7, input the command:  
`=SUM(B2:B6)`

2. Drag the green small square in the corner of cell B7 to the right up to cell D7 to auto-calculate the remaining sums.

	A	B	C	D	E
1	X	P(X)	X	X <sup>2</sup> * P(X)	
2	0	0.18	0	0	
3	1	0.34	0.34	0.34	
4	2	0.23	0.46	0.92	
5	3	0.21	0.63	1.89	
6	4	0.04	0.16	0.64	
7	SUM	=SUM(B2:B6)

`=ROUND(SQRT(I2),1)`**IMPORTANT NOTE:**

To get results identical to those mentioned in the textbook, one should apply the Excel ROUND function with the other functions such as SUM and SQRT with numbers of digits similar to those used in the textbook.

	A	B	C	D	E	F	G	H	I	J
1	X	P(X)	X * P(X)	X <sup>2</sup> * P(X)		Mean ( $\mu$ ) =			1.6

Example 5-11

# Part 2: Calculations using MS Excel add-in MegaStat.

## 5 - 3 The Binomial Distribution

- ▶ **Example 5-18, page 279:** A survey from Teenage Research Unlimited (Northbrook, Illinois) found that **30%** of teenage consumers receive their spending money from part-time jobs. If **5** teenagers are selected at random, find the probability that at least 3 of them will have part-time jobs.
- ▶ Notice that  $n = 5$ ,  $p = 0.3$ ,  $X$  represents the number of teenagers,  $X = 0, 1, 2, 3, 4, 5$ , and the aim is to calculate  $P(\text{at least 3 of teenagers will have part-time jobs}) = P(X \geq 3)$ .

Help

3. Type in the values of n and p in the appropriate fields, then press OK.

We can use the information here to calculate  $P(X \geq 3) = P(X = 3) + P(X = 4) + P(X = 5)$

We can use the information here to calculate  $P(X \geq 3) = 1 - P(X \leq 2)$

The values of  $P(X = 0)$  to  $P(X = 5)$

The values of  $P(X \leq 0)$  to  $P(X \leq 5)$

The values of the mean ( $\mu$ ), variance ( $\sigma^2$ ), and standard deviation ( $\sigma$ ).

The provided values of n and p
