

مهام فني مختبر أحياء

- المعارف والقدرات والمهارات المطلوبة للدخول اختبارات محضرین وفنین المختبرات (كيمياء، فيزياء، أحياء)

- معرفة بطرق تحضير الأدوات والأجهزة الخاصة بالمعمل أو المختبر.

- معرفة بالمواد والمحاليل المستخدمة في المختبر أو المعمل.

- معرفة بأنواع الأجهزة والأدوات المستخدمة في عمليات الفحص والتحليل المختبرى.

- قدرة على استخدام الأدوات والأجهزة والآلات في عملية الفحص والتحليل.

- قدرة على تمييز المواد والمحاليل المستخدمة في المختبر أو المعمل.

- قدرة على إعداد التقارير الفنية الخاصة بالعمل في المختبر.

- قدرة على إقامة علاقات عمل فعالة مع الآخرين والمحافظة عليها.

- القدرة على تطبيق المعارف أعلاه بمهارة.

اسئلة وظيفة فني مختبر احياء

١_ مصطلح **Biology** يعني

٢ _ يتم تكوين البيض في الدجاجة في (بصراحه سؤال عجيب اتمنى لكم ضحكه سعيده) المهم الخيارات معها بداخل قنطرة البيض ولا خارجها ولا مدربي ايش (اول مرره اسمع فهالسؤال ماتذكر قنطرة دجاجه خلال دراسه)

٣ _ سكر المالتوز يتكون من جزيئين من

٤ _ يتكون من جزيئات عديده من الجلوكوز هو

٥ _ انتقال الماء من التركيز الأقل إلى الأعلى هو تعريف:

٦ _ المجهر الضوئي يستخدم

لفحص الكائنات التي لا ترى بالعين الع裸ة

يستخدم عدسات التكبير

قوة التكبير ١٠٠٠

كل ماسبق صحيح

٧ _ مؤسس علم الوراثه العالم (صح شاطرين مندل خخخخ)

٨ _ الكريبوهيدرات (معناه وظيفة الكريبوهيدرات في الجسم)

للطاقة

للبناء

٩ _ الـ DNA يوجد بداخل

١٠ _ الـ RNA

نقل الصفات الوراثية

انتاج البروتين

انتاج الـ DNA

نقل الجينات في الكائنات الدقيقة

١١ _ اي من التالي لا يعد صحيحا في تصنيف الكائنات الحية(مو فاكره الاختيارات لكن راح اكتب مشابه لها)

كتابة اسم الجنس يليه اسم النوع

كتابة الجنس والنوع بخط مائل

كتابة أولها بالحرف كبيره

كتابة النوع يليه الجنس

١٢ سؤال ايضا عن تصنيف الكائنات واي منها صحيح في ترتيب التصنيف
النوع . الجنس . الفصيله ، الرتبه (وباقى الخيارات نفسها بس مغيرين الترتيب بس اتأكدوا من الاجابه)

١٣ المجهر التشريحي

يستخدم لاظهار صوره غير حقيقية للكائنات
للتكبير ٣٠ مره

لاظهار صورة ثلاثية الابعاد

جميع ماسبق صحيح

٤ تبدأ ب OH_-

مجموعة الكربوكسيل

الامين (يعني زي كذا الاختيارات طبعا هادي اسئلة كيمياء حيوى مالنا علاقه فيها عادي اذ جابو
سؤال فيزياء)

٥ الدهون عباره عن

احماض دهنيه وامينيه بس للتنكير فيه سؤال كان مفاجاه وحلو راح تستانسون عليه مثل
يعني تعرفون لما واحد يقولكم اختار ١ ولا ١ ايوه هوه شبهه انتظرو المفاجاه في الاسئله
القادمه

٦ مصطلح يعني *Embryology*

علم الاجنه

علم التشريح

٧ الاوتوكلاف يستخدم لل

٨ الحضانه تستخدم لـ

٩ فيه جهاز غريب جابوه لنا اول مره اسمعه ويستخدم لماندا ومن ضمن الاختيارات قياس
الرطوبة (الأسف حاولت انذكر ايش مكتوب بس الذاكره ماتسعفي كان بالانجليش)

٢٠ من التعقيم الفيزيائي

الأشعة فوق البنفسجية

الكحول

غاز الأوزون

٢١ تعقيم الأدوات في المعمل

الترشيح والذهب

طبعاً سؤال مع انه مالي مختبره كم ساعه لكن هذا اللي قدرت اذكره اللهم لك الحمد كما ينبغي لجلال وجهك وعظم سلطانك

السؤال حق القدرات والمفاجاه كان هو

٢٢ جهاز قياس المعادن الثقيلة هو (بضرب لكم مثل للاجابه العبريه)

١_جهاز

٢_جهاز قياس

٣_جهاز قياس المعادن الثقيلة

٤_جميع الاجابات صحيحة (لا تعليق)

٢٣ سؤال عن اهمية الانقسام الخلوي

يسمح بالتكامل والتصحیح (

١ . يتم تخدير الحيوانات باستخدام :

الكلوروفيل

.....

.....

.....

٢ . يكثر حمض البول في الجسم بسبب مرض :

التقرس

متلازمة كوشينج

أمراض البنكرياس

فرط في الغدة الدرقية

٣ . يظهر (اليوريا) في الجسم بسبب تحلل في

الأحماض الامينية

الدهون الثلاثية

الكوليسترون

البروتينات

٤ . كان السؤال عن تحويل درجة حرارة معينة في الغرفة من مئوي لفهرنهايت

٥ . اذا سقط ضوء على مرآه مقعره فإنه :

ينعكس

يتشتت

ينكسر

لامشيء مما ذكر

٦ . اتحاد جزيئين من السكر ينتج :

السكروز

اللاكتوز

المالتوز

.....

٧ . يتم قياس قطر أنبوبيه شعريه باستخدام جهاز :

الميكرومتر

القدمه ذات رونيه

الميكروسكوب

٨ . اسم وكيل كلية الشئون الادارية في جامعة الدمام هو

٩ . في أي عام تم تسمية جامعة الملك فيصل بجامعة الدمام رسميا

الاجابة ١٤٣٠ هـ

١٠ . عدد تكبيرات صلاة الميت :

٣

٥

٤

٢

١١ . الأولوية في الامامه

لحافظ القرآن

لخريج كلية الشريعة

لأبي مسلم

لكبير السن

١٢ . شرب رجل ٣ أكواب قهوة عندما كان في العمل ثم شرب ثلاثة أكواب أخرى بعد خروجه من العمل فكم سيشرب في الليل :

١

٣

غير محدد

١٣ . امرأة لديها ذهب وزنه ١٠٠ جرام قررت توزيعه على نفسها وعلى بناتها الأربع فكم نصيب كل واحدة منهن :

٢٥

٤٠

١٠

١٤ . الرقم الشاذ من الأرقام التالية :

٦٤

١٢٥

٢٢٥

٣٦

١٥ . السؤال عن نسبة ٥٥ من ٢٠٠ هي

١٦ . أرضية المختبر من الأفضل أن تكون

ذات سيراميكي ناعم

من خشب

مقاومة للانزلاق والمواد الكيميائية

جميع ماذكر

١٨ . أهم ماليبسه محضر المختبر

الكمامة

بالظوا

ايشارب

ملابس غامقه

١٩ . أساسيات الوقاية في المختبر

لبس النظارات الواقية

ليس معطف المختبر

لبس الكمامه

جميع ما سبق

٢٠ . الموظف الجيد يستطيع التعامل جيداً مع :

فنتات كثيرة من المجتمع

مع رفوساعده

مع زملائه في العمل

فنتات قليلة من المجتمع

٢١ . الفني المختبر الجيد يقول

ساسعي لتحقيق اهدافي واعمال

سأسعى ل建立 جيدة مع رؤسائي

سأسعى للنجاح في عمل (لست متأكدة من هذا الخيار)

جميع ماذكر

٢٢ الشجرة والجذور ترافق في معناها

البيت والقواعد

الاصابع واليدين

الملعب والمرمى

.....

٢٣ . اكمل الفراغ : هناك مقوله تقول (ميمان لا يتعلمان المستحي والمتكبر قالها وعمل بها)

الحكماء ، العقلاة

البلهاء ، الحكماء

.....

.....

٤ ٢٤ . معنى مفازة

الحديقة

الفلة

المغاررة العميقية

البئر العميقية

٥ ٢٥ . العدسات لا يصح استخدامها في المختبر لأن

قد تتأثر بأبخرة المواد الكيميائية

قد تسقط أثناء العمل

قد يتكون بخار بين العدسة والعين

.....

٢٦ . التدخين في المختبر غير مسموح لأن :

مضر بصحتك

غير مسموح بالجامعة

يأثر أحياناً على التجربة

يلهثي عن التجربة

٢٧ . من أهم الأضرار الفتاكه بالمجتمع :

الطلاق

المخدرات

.....

.....

٢٨ . من وسائل مكافحة الإرهاب :

التعايش الحوار السلمي

عدم الاستفزاز والاذلال

عدم تشجيع الارهابيين

جميع ماذكر

٢٩ . المختبر السليم يكون :

في الدور الأرضي
له مخرج طوارئ
في الدور العلوي
في الدور الأرضي وبه مخرج طوارئ

٣٠ . الاسراف :

محمود في كل شيء
مكره في الطعام فقط
مكره في كل شيء
محمود في شيء ومكره في شيء آخر

٣١ . معنى الوسطية :

افراط وتفريط
لا افراط وتفريط
لا افراط ولا تفرط
افراط ولا تفرط

٣٢ . عدد الادارية في المملكة العربية السعودية هي :

١٢

١٣

١٥

١٤

٣٣ . لإخماد حريق صغير في المختبر :

استعمال الماء سريعا

طفاية الحريق

انذار الطلبة في المدرسة

اعلام المسؤولين

٤٣ . المركب المشبع هو الذي يحتوي على روابط :

ثنائية وثلاثية

ثلاثية واحادية

احادية وثنائية

.....

٤٥ . العمادة الغير موجوده في الجامعه هي

عمادة اعضاء هيئة التدريس

عمادة الصحة العامة

.....

.....

٤٦ . عند اصابة العين في المختبر بالمواد الكيماينية يفضل عمل التالي :

غسل العين والذهاب للمستشفي

غسل العين واكمال التجربة

.....

.....

٤٧ . الانسولين هو

هرمون

بروتين

هرمون وبروتين

٣٨ / ارتفاع درجة غليان لسائل تعتمد على

١ طبيعة المذاب

٢ نوع المذاب

٣ طبيعة المذيب

٤ نوع المذيب

٣٩ / عند اختيار الموظف

١ المرونة

٢ الابداع

٣ الثقة

٤ جميعها

٤٠ / الغرض من الاختبار التحريري

١ اساس في المفاضله

٢ لا يدخل في المفاضله

٣ غير منصف

٤ ناسيه الرابع

٤١ / معنى يدرعون

١ يدفعون

٢ يخافون

٣ يتوكحون

نموذج ١

1) The definitive host is an animal:

1-*Entamoeba histolitica*

2-*Toxoplasma Gondii*

3-*Trypanosoma cruzi*

4-*E.coli*

5-*Giardia lamblia*

2) One is not found (involve) in colorimetric:

1- Cuvett

2-light source

3- Photo sensor and analyzer

4-fule source

5-Filter

3) The smallest molecular weight Ig is:

1-*IgG*

2-*IgM*

3-*IgD*

4-*IgE*

5-*IgA*

4) Bacteria can cause pathogenesis to human by:

1-*Capsullar*

2-*Secret enzymes*

3-*Endogenous toxins*

4-*Exogenous toxins*

5-*All of the above*

5) Neutrophil count is high in:

1-*Acute bacterial infection*

2- *Iron deficiency anemia*

3-*Megaloblastic anemia*

6) One is not correctly paired:

1. *α-cells* → *glucagon*
2. *β-cells* → *insulin*
3. *Parathyroid* → *calcium*
4. *Corpus luteum* → *Progesterone*
5. *Estrogen* → *seminiferous tubules*

7) Function of pili of the bacteria:

1- *Attachment to the host tissue*

2- *Movement*

3- *Reproduction (multiplication)*

**4- Engulf of food****5- All of the above****8) Hb A2 is consisting of:**

- 1- 3 α chains and 2 γ chains
- 2- 2 α chains and 2 β chains
- 3- 2 α chains and 2 δ chains
- 4- 2 α chains and 3 δ chains
- 5-3 α chains and 2 δ chains

9) The main (most) Hb found in adult is:

1. **Hb A**
2. **Hb A2**
3. **Hb F**

10) Blood medium commonly used in blood bank:

1. **Citrate Phosphate Dextrose adenine (CPD-A)**
2. **EDTA anticoagulant**
3. **Heparin anticoagulant**
4. **Saline alanin glucose maltose (SAGM)**

11) Indirect anti-antibody test used to detect:

1. **Sensitized RBCs in patient blood**
2. **IgG**
3. **IgM**
4. **Sensitized antibody in patient serum**
5. **Non of the above**

12) Direct anti-antibody test used to detect:**1- Sensitized RBCs in patient blood**

1. **IgG**
2. **IgM**
3. **Sensitized antibody in patient serum**
4. **Non of the above**

13) Anti-Human Immunoglobulin is:

1. **Coombs reagent**
2. **Anti-Ab**

3. IgG
4. All of the above
5. Non of the above

14) Rh-ve patient means he dose not have:

1. E antigen
2. D antigen
3. B antigen
4. C antigen
5. Non of the above

15) Detection of malaria parasite is by:

1- Thick blood film

16) One is always non motile gram -ve rods:

1-Haemophilus Influenza

2-Shigella

3- E.coli

4- Salmonella

5- Bordetella Pertusis

17) One is motile gram -ve rods:

1- Haemophilus Influenza

2- Bacillus anthracis

3- Pseudomonas aerogenes

4- Vibrio cholerae

5- Yersinia Pestis

18) One is gram +ve oval (cocci):

1- Bacillus anthracis

2- Meningococci

3- Pneumococci

19) A child diagnosis show scarlet fever the cause is:

1- Streptococcus Pyogenes

2- Staphylococci aureus

20) Xylose Lysine Deoxycholate (XLD) is:

1- Selective media

2- Simple media

3- Differential media

4- Enriched media

5- Enrichment

21) Function of Thyroxin is:

1- Increase Oogenesis

2- Stimulate contraction of uterus

3- Increase basal metabolic

22) Increase in Thyroxin Stimulating Hormone (TSH) causes:

1- Cushing disease

2- Gigantism

2- Exophthalmic goiter

3- Hypoglycemia

23) Function of Estrogen:

1- Increase Oogenesis

2- Stimulate contraction of uterus

3- Increase basal metabolic

24) Infective stage of Entrobius Vermicularis is:

1- Larva

2- Cercaria

3- Egg

4- Cyst

5- Metacercaria

25) Infective stage of Taenia:

1- Larva

2- Cercaria

3- Embryonated egg

4- Cyst

5- Metacercaria

26) Autoinfection of human can caused in case of:

1- Entrobius Vermicularis

2- Taenia Sp.

3- Anelystoma Dudenal

4- Ascaris Lumbercoidis

27) The leukocyte that involve in Adaptive and Acquired immunity:

1- Lymphocyte

2- Neutrophil

3- Monocyte

4- Basophile

5- Eosinophil

28) The atomic mass of an atom is the number of:

1- Protons and neutrons

2- Protons only

3- Neutrons only

4- Electrons

5- Non of the above

29) In case of obstructive jaundice one is commonly not found:

- 1- Total bilirubin is elevated
- 2- High bilirubin in urine
- 3- Direct bilirubin is within the normal
- 4- Dark color of urine
- 5- Clay color of stool

30) In case of Hemolytic jaundice one is not likely to be found:

- 1- Total bilirubin is elevated
- 2- High bilirubin in urine
- 3- No change in color of urine
- 4- Direct bilirubin is within the normal
- 5- Normal color of stool

31) One is not true about acid:

- 1- Proton donor
- 2- Turn litmus paper to blue
- 3- Sour taste
- 4- React with alkaline to give water and salt
- 5- Non of the above

32) Pentose phosphate metabolism cycle is important to the cell because it
give:

- 1- Acetyl CoA
- 2- ADP
- 3- ATP
- 4- NADH
- 5- NADPH

33) Hydrolysis of sucrose result:

- 1- Only glucose
- 2- Galactose
- 3- Fructose + glucose
- 4- Glucose + Glucose
- 5- Maltose + Glucose

34) One is not a Romanowsky stain:

- 1- Fields stain
- 2- Gram stain
- 3- Geimsa stain
- 4- Leishman stain

35) Romanowsky stain consists of:

- 1- Eosin + Alkaline methylene blue
- 2- Eosin only
- 3- Methylene blue only
- 4- Indian Ink

36) Deionization of impure water means:

1- Boiling

2- Filtration

3- Exchange of protons and electrons

37) Iodine stain of Entamoeba cyst used to detect(diagnose):

1- Chromatoidal bars

2- Cell wall

3- Nuclei

38) Hb A consists of:

1- 2 α chains and 2 δ chains

2- 3 α chains and 2 β chains

3- 2 α chains and 2 β chains

4- 2 α chains and 3 β chains

5- 2 α chains and 2 γ chains

39) Normal range of leukocyte is:

1- $4-11 \times 10^9$

40) Diagnostic stage of Ascaris lumbricoides:

1- Finding of a typical fertilized egg in stool

41) Life span of red blood cells in the circulation(body):

1- 80 days

2- 120 day

3- 130 day

4- 20 day

5- 7 days

42) Increase in growth hormone causes:

1- Cushing disease

2- Gigantism

3- Exophthalmic goiter

4- Hypoglycemia

43) If you see this sign (symbol) in the lab it means:

1- Flammable

2- Corrosive

3- Oxidizing

4- Explosive

5- Toxic

44) Reticulocyte is immature:

1- RBC

2- WBC

3- Platelet

45) Best sterilization of Nutrient media done by:

1- Hot air oven

2- Autoclaving

46) Most common method (technique) used to detect hormone amount in the laboratories:

1- Spectrophotometry

2- Enzyme Linked Immuno Surbant Assay (ELISA)

47) Test should be kept away from light:

1- Serum bilirubin

48) Immunoglobulin pregnancy test related to:

1- IgG

2- IgM

3- Human chorionic Gonadotropin

49) Leukocyte responsible for cellular immunity:

1- T-lymphocyte

2- B- lymphocyte

3- Monocyte

4- Basophile

5- Eosinophil

50) Buffer solution is:

1- Chaing color when chaing pH

2- Resist acidic pH

3- Resist alkaline pH

4- Weak acid + weak base

5- Strong acid + weak base

51) An indicator is:

1- Chaing color with chaing pH

2- Resist acidic pH

3- Resist alkaline pH

4- Weak acid + weak base

5- Strong acid + weak base

52) Target of prolactin in female:

1- Ovary

2- Mammary glands

53) Parasite can be detected in vaginal and urethral discharge:

1- Trichomonas Vaginalis

54) Org. (bacteria) arranged in Chinese litters:

1- Corynebacteria Diphtheria

2- Bacillus anthraces

55) Malaria infection transmitted by:

1- Male anopheles mosquito

2- Female anopheles mosquito

56) Heparin is:

1- Protein

2- Enzyme

3- Polysaccharide

4- Oligosaccharide

5- Non of the above

57) One stage prothrombin time used to detect (diagnose) disorders in:

- 1- Extrinsic coagulation pathway (factors)
- 2- Intrinsic coagulation pathway (factors)

58) Thrombin time is:

- 1- Extrinsic coagulation pathway (factors)
- 2- Intrinsic coagulation pathway (factors)

3- The conversion of prothrombin to fibrinogen in addition of thrombin

59) Confirmatory test of streptococcus pneumonia:

- 1- Catalase
- 2- Optochine disc
- 3- Coagulase
- 4- Bile insolubility
- 5- Bacitracin

60) Most sever (serious) malaria infection caused by:

- 1- Plasmodium Falcibarum
- 2- Plasmodium Malaria
- 3- Plasmodium Ovale
- 4- Plasmodium Vivax
- 5- All of the above

61) Parasite can cause fetal cerebral infection:

- 1- Taenia
- 2- Toxoplasma gondii

62) Gram +ve cocci arranged in groups (clusters):

- 1- Streptococci
- 2- Staphylococci

63) Non motile protozoa:

- 1- E.coli
- 2- Entamoeba Histolytica
- 3- Trypanosoma cruzi
- 4- Giardia lamblia
- 5- Trichomonas vaginalis

64) One is always oxidase +ve

- 1- Haemophilus Influenza
- 2- Pseudomonas aurogenase

65) Leukocyte responsible for response to parasitic and allergic infection:

- 1- Lymphocyte
- 2- Nutrophile
- 3- Monocyte
- 4- Basophile
- 5- Eosinophil

نماذج 2

1-Blood of Microfilaria infection diagnostic with:

Wuchereria bancrofti

2-Oocyst benefited to diagnose:

E.histolytica

E.coli

Toxoplasma gondii

Giaradia lamblia

Typanosoma cruzi

3-intracellular parasite:

E.coli

Toxoplasma gondii

Giaradia lamblia

Typanosoma cruzi

Trichomonas vaginalis

4- An animal is a definitive host:

E.histolytica

E.coli

Toxoplasma gondii

Giaradia lamblia

Typanosoma cruzi

5-consider ketose:

Glucose

Fructose

Mannose

6- non motile protozoa:

E.histolytica

E.coli

Toxoplasma gondii

Giaradia lamblia

Typanosoma cruzi

7-cutaneous leishmaniasis transmitted by:

Phlebotomus sand fly

8-malaria transmitted by :

Female anopheline mosquito

Male anopheline mosquito

9-shistosoma hematobium diagnosis:

Egg in urine with terminal spine

10-not find in the flam photometry :

Burner

Filter

Fuel source

Cuvete for sample

Photo

11-low effective sterilization with:

Ethyl alcohol 70%

Methyl alcohol

chloroform

5%phenol

5% cresol

12-prolonged fast cause:

Hyperglycemia

Keton in urine

13-One is not correctly paired:

α - cells → glucagon

β - cells → insulin

Estrogen → seminiferous tubules

Corpus luteum → Progesterone

Parathyroid → calcium

14- bacteria motile gram-rods:

Shigella

Bordetella pertussis

Pseudomonas aeruginosa

Yersinia pestis

15-presence one from this substance in urine detect abnormal condition:

Calcium

Phosphates

Glucose

Urates

16-hypersecretion of cortisol cause:

Cushing disease

17-in cardiac infarction one of the measurements is not benefited:

Creatinine

18-elevated in parasitic infection and allergy :

IgE

19- with romanowsky stain ,2-5 lobes and give violet or pinkish

granules:

Nutrophile

Eosinophile

Basophile

Monocyte

20-lense near the slid in light microscope :

Objective

Eye lenses

21-one of the following has highest conc. Of cholesterol:

Chylomicron

LDL

HDL

VLDL

Apolipoprotein

22-hypersecretion of insulin cause:

Hypoglycemia

23-hyperglycemia hormone

Glucagon

24- B-lymphocyte after attack foreign bodies ,called

Plasma cell

25- technique used for detect Hormon amount:

ELIZA

26-does not sterile with hot air oven:

Dry glassware

Oil

Powder

Waxes

Rubber gloves

27-lymphocyte is elevated in :

Viral infection

Acute bacterial infection

Iron deficiency anemia

Megaloblastic anemia

non of the above

28- The smallest molecular weight Ig is:

1-IgG

2-IgM

3-IgD

4-IgE

5-IgA

29-gram-v bacteria colonies color :

Dark purple

Pale to dark red

Orange

30- bacteria need dark field to detect

T.pallidum

31-Autoclave sterilize in temp:

121°C-20min

32-strict aerobe bacteria

Mycobacterium

33-citrate test assis :

Mycobacterias

Staph

Strept

Colistridia sp

34-nutrent agar:

Basic media

35- hypoparathyroidism hormone cause:

Elevated ca level

Decrease ca level

36-use O cell tube on lab for:

As control

To detect Ag

To detect Ab

37-all cause false –v ABO blood grouping except

Too short incubation

38-prothrombin time detect:

Extrinsic pathway of coagulation

39-alkali skin burn treatment by neutralization with:

Sodium bicarbonate powder

Boric acid

Acetic acid 1%

Cold water

Hot water

40-acid skin burn treatment by neutralization with:

Sodium bicarbonate powder

Boric acid

Acetic acid 1%

Cold water

Hot water

41-store RBC at -80°C:

1year

1month

4 year

2 year

6year

42-defferenital test for:

Leukocyte

43- disease caused by pyogen stereptococcus:

Scarlet fever.

44- you do not take this stage for tratment small cut In emergency :

Clean with soap and water

Do pressure with piece

Immediately rinse mouth well and water

Cover it with water dressing

Sterilize

45- org cause bloody in stool:

Shigella sp.

46-sensitized Ab in serum detect by:

Indirect antiglublin test

47-thrombin time measure:

Convert fibrinogen to fibrin with activate of thrombin

48- in presence of clotting defect one of this not measure:

Leucocyte count

49-in Rh-v person , this Ag not found :

D-antigen

50-Z.N stain use for diagnose :

Mycobacteria

51-media use for differentiate between L.F and N.L.F:

Maconky media

52-bleeding time test detect the abnormality in :

Defect in vessels and platelets

53- Immature RBC that is normally presence in blood film:

Erythrocyte

54- erythrocyte is immature cell of:

RBC

55-S hemoglobin is the same defect of thalassemia but the different is :

Long B chain

Glutamic acid on B chain is substituted with valine

Glutamic acid on a chain is substitutes with valine

56- hormone that cause replication of RBC:

Erythropoietin

57- use for clean slide:

Ethyle alcohol

Methyle alcohol

58-oxytocine hormone function:

Contribution of Uterus

59-regulation of calcium level in serum by:

Calcitonine hormone only

Parathyroid hormone only

Calcitonine with parathyroid hormone

Vitamin D

PTH+Vitamin D+calcitonin

60-the defect of thalassemia occur in:

Cycle of heme

Glubin chain

61-Normal range of WBCs:

4000_11000

62-stain use for tuberculosis:

Lewis Jensen stain

63- pyrimidin base:

Adenine

Guanine

Thymine

Uric acid

Urea

64- one use for measure abnormality in kidney :

Creatinine

65- not romanowsky stain :

**Gram stain****66-does not stimulate with slight hemolysis:****Cholesterol****67-one of them use for susceptible abnormality kidney:****Creatinin****68- in O+v person****No presence of Ag****No presence of Ab****69-one is stimulate on serum calcium level:****Prolonged application of tourniquet on arm****70-Eiosinophil is high in :****Parasitic infection and allergic reaction.**

نموذج ٣

1. the infective stage of animal parasite

- **Toxoplasma gondii**

1. the (u) unit used to evaluation of :

- **Protein in serum**
 - **Hemoglobin**
 - **Hormone assay**
 - **Enzymatic activity**

1. the following is ingredient of culture medium:

- **Meat extract**
- **Minral salts**
- **Agar**

- *Peptone*
- *Non of the above*
- *All of the above*

1. a semen specimen, contain sugar source of the spermatozoa energy is:

- *Glucose*
- *Mannose*
- *Glaactose*
- *Fructose*
- *Sucrose*

5.CPD A anticoagulant used to store blood for:

- *35 days*
- *45 days*
- *5 days*
- *15 days*
- *Non of the above*

6During reaction of two chemical substances , the color produced asses by

- *Spectrophotometer*
- *Flame photometer*

7.glycolysis done in :

- *Nucleus*
- *Endoplasmic reticulum*
 - *Mitochondrion*
 - *Cytoplasm*
- *Non of the above*

8.one of the above not present in Diabetic mellitus coma :

- *Hyperglycemia*

- ***Hypercholesterolemia***
- ***High number of ketene in urine***
 - ***Non of the above***

9. in which substance give blood glucose when hydrolysis :

- ***Muscle glycogen***
 - ***Liver glycogen***
 - ***Heart glycogen***
 - ***Unsaturated fat***
 - ***Triglyceride***

10. in Anti human globulin test do wash of RBC because all serum contain :

- ***Albumin***
- ***a_globulin***
- ***b_globulin***
- ***fibrinogen***
- ***Immunoglobulin***

11. the most source of ATP in cell is :

- ***Mitochondria***
- ***Cytoplasm***
- ***Nucleus***
- ***Cell wall***

12 . H Ag present in :

- ***Pilli***
- ***Capsule***
- ***Flagella***
- ***Cell membrane***

13. urea is final product of catabolism of:

- ***amino acid***
- ***triglyceride***
- ***cholesterol***
- ***polysaccharide***

14.Which of White blood cell give immunoglobulin :

- ***lymphocyte***
- ***Neutrophil***
- ***Basophile***
- ***Monocyte***
- ***Eosinophil***

15.Blood of Microfilaria infection diagnosis with :

- ***Wuchereia bancrofti***

16.one of the immunoglobulin present in trace amount in serum :

- ***IgG***
- ***IgE***
- ***IgM***
- ***IgD***
- ***IgA***

17.gram ve bacteria colonies color appear :

- ***Dark purple***
- ***Pale to dark red***
- ***Orange***

18. alkali burn treatment by neutralization with :

- ***Sodium bicarbonate powder***
 - ***Boric acid***
 - ***Acetic Acid***
 - ***Cold water***
 - ***Hot water***

19.reason of false positive ABO in compatibility:

- ***Cold agglutination***

20. selective and Differential medium of entero pathogen is:

- Chocolate agar
- Blood agar
- **DCA medium**
- Meat extract agar
- Non of the above

21.in O blood group the Ab in serum is :

- Anti A1B
- Anti A
- Anti B
- Non of the above
- **All of the above**

22.Neutrophil is a common White blood cell present in blood and the percentage of presence is :

- 90%
- 15%
- **75%**

23.The leukocyte that involve in Adaptive and Acquired immunity

- **Lymphocyte**
- Monocyte
- Neutrophil
- Basophil
- Eosinophil

24. one of these is prokaryotic cell:

- Fungi
- Bacteria
- **Entameba histolytica**
- All of the above
- Non of the above

25.Most sever (serious) malaria infection caused by:

- **Plasmodium faliceparm**

- *Plasmodium Malaria*
- *Plasmodium Ovale*
- *Plasmodium Vivax*
- *All of the above*

26. To detect pH from solution use :

- *pH meter*
- *Indicator*
- *Micrometer*

27. one of these organism multiply intracellular parasite:

- *Gardia lamblia*
- *Entameba histolytica*
 - *E. coli*
- *Tryponosoma Cruzi*
- *Toxoplasma gondii*

28. gram-ve rod non motile :

- *Salmonella*
- *Yersini pestis*
- *Shigella species*
- *Vibrio cholerae*

29. Leukocyte responsible for cellular immunity:

- *T_ lymphocyte*
- *B- lymphocyte*
 - *Monocyte*
 - *Basophile*
 - *Eosinophil*

30. one of these org gram +ve cocci arranged in pairs :

- *Staphylococci*
- *Streptococci*
- *Meningococci*
- *entrococci*

**31. One is not a Romanowsky stain**

- *Fields stain*
- *Gram stain*
- *Geimsa stain*
- *Leishman stain*

32. Hydrolysis of sucrose result:

- *Only glucose*
- *Galactose*
- *Fructose + glucose*
- *Glucose + Glucose*
- *Maltose + Glucose*

32.method used to detect horomone in the laboratory :

- *ELIZA*

33.one of the following has highest conc. Of cholesterol:

- *Chylomicron*
 - *LDL*
 - *HDL*
 - *VLDL*
- *Apolipoprotein*

34. oxytocine hormone function :

- *Increase Oogenesis*
- *Stimulate contraction of uterus*
- *Increase basal metabolic*

35. Iodine stain of Entamoeba cyst used to detect (diagnose):

- *Chromatoidal bars*
 - *Cell wall*
 - *Nuclei*

36. function of Cortisol :

- *Increase Oogenesis*
- *Stimulate contraction of uterus*
 - *Increase basal metabolic*

37. infective stage of Ascaris lumbricoides :

- *Larva*
- *Cercaria*
 - *Egg*
 - *Cyst*
- *Metacercaria*

38. substance used in catalyse reaction :

H_2O_2

39. Normal range of erythrocyte

- 4,5- 6,5X 10⁹

40. one of these leukocyte have 2-5 lobes in nucleus :

- *Neutrophil*
- *Basophil*
- *Monocyte*
- *Lymphocyte*
- *Eosinophil*

41. one of these cell the largest leukocyte cell:

- *Neutrophil*
- *Basophil*
- *Monocyte*
- *Lymphocyte*
- *Eosinophil*

42. Alkaline phosphatases is the important enzyme to detect function in :

- Liver
- Bone
- Liver and bone
- Non of the above

43. one of the following anticoagulant used for blood glucose :

- EDTA
- Heparin
- Sodium oxalate
- Florida Oxalate
- Sodium citrate

44. AST important enzyme to detect abnormality in:

- Liver disease
- Heart disease
- Liver and heart disease
- Non of the above

45. the defect of thalassemia occur in:

- Cycle of heme
- Glubin chain

46 this Symbol means, when you see in laboratory :

- acute flammable
 - Toxic
- Corrosive
- Explosive

نماذج ٤

Choose the correct answer:

(1)the best anti coagulant in blood culture is *sodium oxalate

*sodium citrates

*sodium sulphate

(2)all the following samples are stained using gram stain except?

*water culture

*sputum

*stool

(3)the percentage of sodium chloride in agar culture is?

*0.058%

*58.0%

***0.58%**

(4)agar is characterized by all the following except?

*freezing point is 42c & melting point is 100c

*nutritive

*un-nutritive

(5)the normal value of (Na) in serum is?

*135-145 mg/dl

*135-145 mmol/dl

***135-145 mmol/l**

(6)gram stain starts with?

*iodine

*crystal green

*methyl violet /

(7)the causative of toxoplasma is?

*fleas

*dogs

***cats**

(8)gram negative samples are stained with?

*yellow color

*blue color

***red colonies**

(9)the color of cholera when cultured on TCBS?

*blue

*green

***yellow**

(10) the diameter of micro pore filter used in bacteria filtration is?

*0.033microns

*2.2microns

***.22microns**

(11) leishmania is transported by?

*mosquitoes

*pugs

***sand fly**

(12)to investigate one sample containing floro-carbon we use which microscope?

*light microscope

*brilliant microscope

***fluorescent microscope**

(13) virus is similar to live organisms in?

*growth

*movement

***reproduction**

(14)the largest resolution of the microscope is?

*0.02microns

*2.0microns

***0.2microns**

(15) which of the following is liver function test?

*liver enzymes

*serum + urin billrubin

***all of the previous**

(16)which of the following causing enlargement of RBCs?*reticulocytes

*leishmania

***plasmodium**

(17)the best sample for the culture of children paralysis virus is?

*anal swab

*blood culture

***stool culture**

(18)dry air oven is used to sterilize?

*water

*culture media

***sand**

(19)the diabetic patient is going to comma when blood glucose is?

*120 mg/dl

*160 mg/dl

***less than 50mg/dl**

(20)to differentiate between the two streptococci group which enzyme is used?

*coagulase

*kinase

***catalase**

(21)the microscope which used in investigate syphilis is?

*light microscope

*ultra-violet microscope

***dark field microscope**

(22)the antibiotic disc which differentiate between group A streptococci and other groups is?*neomycin

*tetracycline

***bacitracin**

(23)all of the following is true for salmonella except?

- *motile
- *produces H₂S
- *oxidase positive

(24)amylase value is high in the following disease?

- *salivary glands
- *pancreas diseases
- *all of the previous

(25)one jaundice patient has yellow skin, his billrubin is:

- *2.5mg/dl
- *1.2mg/dl
- *5.0mg/dl

(26)acute diabetic patient has?

- *blood sugar more than 150mg/dl
- *blood sugar more than 180mg/dl
- *glucose & acetone in urin

(27)the normal value of billrubin is?

- *0.2-2.0mg/dl
- *less than 2.0mg/dl
- *less than 1.0mg/dl

(28)diabetic patient has one of the following symptoms?

- *acidosis
- *alkalosis
- *dryness

(29)insulin is regulating blood sugar by?

- *increase the influx of glucose into cells
- *activate glycogenesis
- *all the previous

(30)the nutritive substance in culture media is?

- *sugar
- *starch
- *agar

(31)the best media for urin culture is?

- *blood agar
- *chocolate agar
- *cled agar

(32)the sterilization of autoclave is?

- *85c for 30min
- *150c for 30min
- *121c for 15min

(33)shigella soni colored in maconkey & EMB?

- *colorless
- *red
- *pink

(34)the oil emersion lens is*

*40

*100

(35)the dwarf worm is?*

*tenia saginata

*H.nana

(36)all of the following are present in gram stain except?

*safranine

*iodine

*malachite green

(37)the diagnostic stage of amoeba is?

*cyst

*trophozoite

*all previous

(38)to check the intestinal efficacy the following test is done?

*pepsin

*lipase

*stool fats

(39)the worm that causes blood in urin?*

*fasciola

*schistosoma haematobium

(40)the significant count of bacteria to be inflammation is?

*less than 10^5

*more than 10^3

*more than 10^5

(41)to investigate gram stained samples we use the following microscope?

*double phase microscope

*fluorescent microscope

*light microscope

(42)the most important buffer system in blood is?

*acetic acid system

*hemoglobin system

*bicarbonates system

(43)all the following bacteria are interobacter except?

*E.coli

*proteus

*non of the previous

(44) in the microscope when using objective lens 10 & eye lens 10 the magnification power of the microscope is?

*10

*1000

*100

(45)all the following parameters affecting gram staining except?

*use H₂SO₄

*add absolute alcohol after washing

***delaying the dryness of the slide**

(46) glycogen is stored in?

*liver

*muscles

*all the previous

(47) malaria chizonts are present in?

*reticulo-endothelial

*leukocyte

*RBCs

(48) comma of diabetic patient shows?

*glucose grater than 200mg/dl

*glucose less than 200mg/dl

*glucose grater than 500mg/dl

(49) blood donor selection in KSA are all of the following except?

*Hb% 12.5-16

*free from syphilis

*one year after delivery

(50) solidifying agent in culture media is?

*wax

*starch

*agar

(51) agar which used as a solidifying agent in culture media concentration is?

*5-9%

*4-9%

*1-2%

(52) to sterilize culture media we use?

*boiling

*hot oven

*autoclave

(53) bone matrix can also called? *vascular tissue

*fibrous tissue

*osteon

(54) unidirectional movement of WBCs directly to its target is? *sliding

*phagocytes

*chemo taxis

(55) when focusing a stained smear under oil immersion field the magnification is?

*10

*40

***100**

(56) in myocardial infection?

*level of LHD high

*level of GOT high

***level of CK-MB high**

(57) variation in RBCs size?

*microcytosis

*macrocytosis

*aniso cytosis

(58) pretransfusion test that is performed using the patient red cells and donor plasma?

*Anti body screen

*major x-matching

*minor x-matching

(59) serum LDH is elevated in all the following except?

*skeletal disease

*cardiac/ hepatic diseases

*renal disease

(60) elevated sodium & chloride is seen in? *shock

*diabetic acidosis

*severe dehydration

(61) which test is better to diagnose chronic bile duct?

*total bilirubin

*S-GOT

*ALP

(62) generally diagnosed by recovery & identification of typical larva in stool?

*hook worms

*t. trichura

*s. stercoralis

(63) enlarged RBCs are common in?

*p. malaria

*p. falciparum

*p. vivax

(64) which of the following is not laying eggs in small intestine?

*hook worm

*t. saginata

*pin worm

(65) blood sample is used to diagnose?

*C. tetani

*C. diphtheria

*non from them

(66) how much water should we add to 500ml of a solution of 10% of NAOH to bring it to 7.5%?

*666

*250

*166

(67) while using the pregnancy test we are measuring?

*total HCG

*beta HCG & LH

***beta HCG**

(68)with age the renal threshold for glucose?

*increase

*decrease

***does not change**

(69)calibrator sera are?

*secondary standards

*internal standards

***primary standards**

(70)a buffer made of?

*a strong acid + a strong salt

*a weak acid + a weak salt

***a weak acid + a strong salt**

(71)a standard micro plates in ELISA test has?

*98 wells

*94 wells

***96 wells**

(72)the enzyme in ELISA testing is present in the?

*buffer

*micro plate

***conjugate**

(73)antigen antibody complex are?

*weakly bound

*no bounds

***strongly bound**

(74)washing must be done in all heterogeneous ELISA technique because?

*increase the specificity

*increase the sensitivity

***it removes the excess binding**

(75)the label in ELISA tests is?

*radio active substance

*antibody

***enzym**

(76)the difference between plasma & serum is that plasma?

*does not contain fibrinogen

*has more water

***contains fibrinogen**

(77)five ml of colored solution has an absorbance of .500nm

The absorbance of 10ml of the same solution is?

*1.000nm

*0.250nm

***0.500nm**

(78)plasma or serum should be separated at the earliest time for estimation of glucose because?

*glucose value increases with time

*lyses of blood will occur

*glucose value decreases with time

(79) sensitivity & specify are?

*directly related

*they mean the same

*non of above

(80)a dichromatic analysis is carried to increase?

*linearity

*specify

*sensitivity

(81)causes of high serum bilirubin are?

*overload on liver

*haemolysis

*all of the previous

(82)polio myeletis is transmitted through?

*skin

*respiration

*feco-oral

(83)malaria does not grow in?

*EDTA blood

*heparin zed blood

*plasma

(84)serious that causes food poisoning?*staph albus

*salmonella typhi

*salmonella enteritidis

(85)hemophilia man married to normal woman the incidence of his children is?

*carrier male

*diseased female

*carrier female

(86)which of the following causes UTI & INDOL positive?

*klebsiella

*staphylococci

*E.coli

(87)blood transfusion can transmit?

*HIV

*CMV

*all of the previous

(88)ADH is secreted from?

*thyroid gland

*anterior pituitary

*posterior pituitary

(89)one of the following enzymes is effected by hemolysis?

*SGOT

*SGPT

*LDH

(90) HbA1C of diabetic patient is important for?

- *he has to come fasting
- *short term follow up
- *long term follow up

(91) for glucose tolerance test? *collect 5 blood samples only

- *collect 5 urine samples only
- *collect 5 blood samples + 5 urine samples

(92) one of the following heart enzymes is measured after 4-8hr of chest pain? *GOT

- *LDH
- *CPK

(93) light effects one of the following?

- *glucose
- *urea
- *bilirubin

(94) one of the following is specific diagnostic liver enzyme?

- *GOT
- *LDH
- *GPT

(95) one of the following is important before anesthesia?

- *alkaline phosphates
- *acidic phosphates
- *pseudocholine esterase

(96) acid phosphates is?

- *heart enzyme
- *liver enzyme
- *prostatic enzyme

(97) In uric acid estimation?

- *it's affected by carbohydrate meal
- *no need for fasting
- *the patient has to come fasting

(98) all of the following are affected by meal except?

- *glucose
- *albumin
- *creatininine

(99) Na is the main?

- *intra cellular anion
- *intra cellular cation
- *extra cellular cation

(100) one of the following electrolytes is effected by hemolysis?

- *Ca
- *Mg
- *K

(101) the best kidney function test?

*urea

*total protein

*creatinine clearance

(102)for GGT in adults the dose of glucose is?

*50gram

*100gram

***75gram**

(103)for GGT in children the dose of glucose is?

*30mg

*15gram

***30gram**

(104)random blood glucose gives an idea?

*to justify blood glucose

*fasting patient

***blood glucose in urgent cases**

(105)immunoglobulin is?

*B globulin

*Alfa globulin

***Gamma globulin**

(106)exogenous triglyceride is carried on?

*VLDL

*HDL

***chylomicron**

(107)endogenous triglyceride is carried on?

*LDL

*HDL

***VLDL**

(108)harmful cholesterol is carried on?

*HDL

*VLDL

***LDL**

(109)useful cholesterol is carried on?

*chylomicron

*LDL

***HDL**

(110)for lipid investigation patient has to fast?

*4-6hr

*6-8hr

***12-14hr**

(111)to measure G6PD we use?

*plasma

*serum

***whole blood on EDTA**

(112)amoeba moves by?*cilia

*flagella

***pseudopodia**

(113)one of the following is capsulated bacteria?

**streptococci*

**E.coli*

**klebsiella*

MCQS (MULTIPLE CHOICE QUESTIONS)

Which of the following culture media is suitable for semi quantitative bacterial count in urine samples

a-Mc Conkey agar

b- Blood agar

c-XLD medium

d-Mannitol salt agar

e-CLED medium

The following organisms are lactose fomenter except

a-*E. coli*

b-*Enterobacter cloacae*

c-*Shigella sonnei*

d-*Proteus spp.*

Bacteriological media can be sterilized in :-

a-Oven

b-Filtration

c-Autoclave

d-Bunsen burner

All of the following are true except :-

a-Agar is inert

b-Nutritious

c-Solidity at 42c

d-Melts at 100c

Primary stain of Gram stain :-

a-Crystal violet

b-Iodine

c-Safranine

The following are used in Gram staining except:-

a-Crystal violet

b-Iodine

c-Safranine

d-Malachite green

Growth of vibrio cholerae on TCBS medium produces colonies :-

a-Yellow colonies

b-Blue colonies

c-Green colonies

d-White colonies

e-Red colonies

On EMB /Mc Conkey agar the Salmonella/Shigella give small colonies , which colour of the following appear

a-Black

b-Pink

c-Yellow

d-Brown

e-Colorless

f-Yellow-brown

Which color do Gram negative appear:-

**a-Blue****b-Green****c-Yellow****d-Red****All is true about Enterobacteriaceae except :-****a-They are hemolytic and sorbitol****b-Ferments Mannitol****c-grow in Methylene blue medium****d-Inhibited growth with 6.5 % NaCl and/or at temperature 60 %****Which of the following is sterilized in the oven :****a-Media****b-Sand****c-Water****d-Blood****e-All of the above****All are component of Gram stain procedure except :-****a-Safranine****b-Malachite green****c-Iodine****d-Crystal violet****All are lactose fermenters except :-****a-E.coli****b-Enterobacter cloaceae****c-Proteus spp.****d-Shigella****All are true of campylobacter jejuni or****Which of the following statements about campylobacter****Is false:-****a-Gram negative curved bacilli****b-Slow growth****c-Grow on XLD medium****d-Arranged in pairs****A parasite which does not deposit eggs in the intestine****a- E. vermicularis****b-A. duodenale****c-A. lumbricoides****d-T.saginata****e-T. spiralis****Specimens from a polio victim for culture can be best made on :-****a-Blood****b-Urine****c-Feces****d-CSF****e- Throat / Nasal washing****The best anticoagulant for blood culture specimen is:-****a-Heparin****b-EDTA****c-Oxalate****d-SPS****e-ACD****The vector for leishmania infection is :-****a-Tsetse fly**

**b-Sand fly****c-Housefly****d-Anopheles mosquito****e-Reduvid bugs**

Beta hemolysis is enhanced when group B Streptococci is streaked at an angle in blood agar plate with :

a-Streptococci**b-Staph aureus****c-Micrococcus****d-Streptococcus epidermidis****e-Corynebacterium diphtheriae**

All statements are true about proteus mirabilis and Proteus vulgaris except :-

Oxidase negative & liquefies gelatin**a-Exhibits swarming on BAP and Mc Conkey's agar****b-Urease positive****c-KCN and N2S positive****d-Positive to INDOLE test**

To obtain an isotonic media, sodium chloride content should be :-

a- 0.85 g %**b-0.085 g%****c- 8.5 g%****d- 6.5 g%****e- 0.50g**

All is true about Salmonella organism except:-

a- The main reservoir is human**b-Contains O and H antigen****c-Urease , KCN and phenylalanine (negative)****d-H2S positive with gas****e-INDOLE +**

Mycobacterium tuberculosis is called acid-fast because :-

a-It is easily stained by Gram stain**b-Once stained , it can not be remove by acid****c-It is easily decolorizes after staining.****d-It is very easy to stain****e-It is stained by an alkaline stain****f-None of the above****g-All of the above**

Group B Beta-hemolytic streptococci are differentiated by other streptococcus groups by using :-

a-Optochin**b-Neufeld Quelling reaction.****c-Niacin test****d-Catalase test.****e-Bacitracin sensitivity disc**

Most of pathogenic strains of streptococcus belongs to group :-

a-Viridans**b-Beta-hemolytic****c-Alpha-hemolytic****d-Group D****e-Micrococcciae**

Bacterial sterilization of serum can be accomplished by the filtration using a porosity of :-

- a- 0.22 u
- b- 0.80 u
- c- 0.60 u
- d- 4.0 u
- f- 5.0 u

1. SELECT THE LETTER OF THE BEST ANSWER

The trophozoite , which contains red blood cells in the cytoplasm , brings to this parasite:-

- a-*Entamoeba histolytica*
- b-*Entamoeba gingivalis*
- c-*Entamoeba coli*
- d-*Iodamoeba butschlii*
- e-None of the above

sterilization by the autoclave is best accomplished at

- a -100 c/ 30 minute
- b-100c/10 minute
- c-200c/30 minute
- d-121c/30 minute
- e-121c/10 minute

The causative parasite of Egyptian Bilhariosis

- a-*Trichomonas Vaginalis*
- b-*Schitosoma haematobium*
- c-*Schitosoma japonicum*
- d-*Schitosoma mansoni*
- e-All of the above

On EMB and Mc Conkey's agar , the colour of the colonies of Shigella – Salmonella is :

- a-Black
- b-Green
- c-Pink
- d-Yellow
- e-Colourless

The IMVIC Reaction of E. coli is

- a/ + + - -
- b/ - - + +
- C/+ + + -

d/+ - + -

Dwarf Tapeworm is known as :-

- a-Tania saginata
- b-Taenia solium
- c-Hymenolepis nana
- d-Diphilidium caninum
- e-Echinococcus granulosus

The solidifying content of the culture media Is

- a-Wax
- b-Litmus milk
- c-Peptone broth
- d-Agar
- e-Meat Extract

1. Micro-organisms that grow at 60 c are classified as :-

- a-Psychrophilic
- b-Mesophilic
- c-Halophilic
- d-Thermophilic
- e-Saprophilic

A diagnostic finding for Giardia lamblia in stool :-

- a-Cyst in stool
- b-Cyst and trophozoite in stool
- c-Characteristic ova
- d-Trophozoite in stool
- e-All of the above

Which of the following is an enrichment medium :-

- a-CLED
- b-BAP
- c-MAC
- d-Thiocyanate broth
- e-Chocolate agar

Which of the following indicates a blood agar plate?

- a-Corynebacterium diphtheriae

b-Mycobacterium tuberculosis

c-Bordetella pertussis

d-Francisella tularensis

e-None of the above

All are member of the family Enterobacteriaceae except :-

a-Klebsiella pneumonia

b-Yersinia pestis

c-Pseudomonas aeruginosa

d-Shigella dysentriiae

e-Campylobacter jejuni

A specific test for staphylococcus aureus is

a-Catalase test

b-Coagulase test

c-Optochin sensitivity test

d-Bacitracin sensitivity test

e-CAMP test

The concentration of agar in the culture medium is

a- 10 - 11 %

b- 20 %

c- 50 %

d-60 %

e- 1-2 %

Best for identification of parasite if you can not see it in stool (Negative in stool)

Concentration Technique

Identification of fertilized eggs in feces

Ascaris Lumbricoides

Causes false negative ABO incomparability/ cross matching :-

a- Deteriorated reagent

b-Not putting antisera c-Under incubation

THAYER-MARTIN MEDIA IS THE CHOICE FOR THE ISOLATION OF THE FOLLOWING ORGANISM : -

A-PSEUDOMONAS AERUGINOSA

B-HAEMOPHILUS INFLUENZAE

C-NISSERIA GONORRHOEA

CONFIRMATORY TEST FOR STREPT. PNEUMONIAE :-

A-OPTOCHIN SENSITIVITY DISC

B-BACITRACIN DISC SENSITIVITY

**C-BILE SOLUBILITY****D-CATALASE TEST****IN FOLIC ACID DEFICIENCY WHAT HAPPENS TO RBCS :-****A-ENLARGED RBCS (MEGALOBLASTIC ANAEMIA)****B-CRENATED RBCS****C-HAEMOLYZED RBCS****IN IRON DEFICIENCY ANAEMIA :****RBCS ARE SMALLER THAN NORMAL = MICROCYTIC****HYPOCHROMIC ANAEMIA****SPECIMEN SUITABLE FOR MICROFILARIAE****A-TISSUE****B-BLOOD****C-FLUID****WHICH OF THE FOLLOWING ORGANISMS IS AN ANAEROBIC BACTERIUM :-****A-CLOSTRIDIUM SPP.****B-HAEMOPHILUS****C-E. COLI****D-YERSINIA ENTEROCOLITICA****Ig (IMMUNOGLOBULIN) INCREASED IN CASE OF****PARASITIC INFECTION & ALLERGY****A- IgG****B- IgA****C- IgM****D- IgE****THE INFECTIVE STAGE OF ANCYLOSTOMA DUODENALE IS :-****A- EGGS IN STOOL****B- LARVA IN STOOL****C- LARVA IN TISSUE****D- CYSTICERCUS BOVIS****NUTRIENT AGAR IS :-****A- SELECTIVE MEDIA****B- DIFFERENTIAL MEDIA****C- SPECIAL MEDIA****D- BASIC medium****PURPOSE OF STANDARD DEVIATION :****A- TO MEASURE EXTERNAL QUALITY CONTROL****B- TO MEASURE INTERNAL QUALITY CONTROL****C- PRECISE & ACCURACY****D- BOTH A & B****THE FOLLOWING ORGANISMS ARE ENCAPSULATED EXCEPT :-****A- PSEUDOMONAS AERUGINOSA****B- E. COLI****C- HAEMOPHILUS INFLUENZAE****D- STREPTOCOCCUS PNEUMONIAE****1. WHICH OF THE FOLLOWING IS PROTECTED FROM LIGHT :-****A- BILIRUBIN****B- CHOLESTEROL****C- TOTAL PROTEIN (TP.)****D- BUN (BLOOD UREA NITROGEN)****TO DIFFERENTIATE ANTI I FROM ANTI II****A- A1 CELLS**

B-A2 CELLS

C-CORD CELLS

D-NONE OF THE ABOVE

WHAT PRACTICAL CARDIOLIPIN IS APPLICABLE IN LABORATORY WORK ?

A-FTA

B-VDRL & RPR

C-RPR ONLY

D-VDRL ONLY

Vi Ag IS SEEN IN :-

A-CAPSULE

B-PILI

C-SPORE

D-FLAGELLA INFECTIVE STAGE OF ASCARIS :-

A-FERTILIZED EGG

B – RHABDITIFORM LARVA

C-LARV

A-IgM (HEAVIER) 1St

B-IgA

C-IgE

D-I

ALL OF THE FOLLOWING CAN ASSES THE LIVER FUNCTION EXCEPT :-

A-AST

B-ALT

C-ALP

D-CREATININE

SUBSTANCE PRESENT IN ANY AGAR PLATE THAT PROMOTES THE BACTERIAL GROWTH :-

A-WATER (H₂O)

B-NITROGEN

C-MINERALS

C-O₂

ORGANISMS PRODUCE GAS GANGRENE :-

A-BACILLUS ANTHRACIS

B-CLOSTRIDIUM PERFRINGENS

C-STREPTOCOCCUS PNEUONIAE

D-HAEMOPHILOS INFLUENZAE

PURINE ASSOCIATED WITH

A-ADENINE

B-GUANINE

C-URIC ACID

D-RNA

Ig CAN CAUSE HDN :-

A-IgM

B-IgA

C-IgE

D-IgG

Ig NOT PART OF ACQUIRED IMMUNITY :-

A-IgM

B-IgA

C-IgE

D-IgG

PROTOZOA THAT IS NOT MOTILE

A-ENTAMOEBA HISTOLYTICA

B-E. COLI

C-GARDIA LAMBLIA

D-TRYPANOSOA CRUZI

ALL CELLS ARE NUCLEATED EXCEPT :-

A-LYMPH

B-MONOCYTES

C-RBCS

D-NEUTROPHIL

THE INTERMEDIATE HOST OF TOXOPLASMA IS :-

A-DOG

B-CAT

C-.MOUSE

D-ALL

E-NONE

CROSS-MATCHIN

DONOUR CELLS +PATIENT SERU

VIRUSES RESEMBLE LIVING THINGS IN THAT THEY :-

A-ARE MOTILE

B-ARE CRYSTALLINE

C-GROW

D-REPRODUCE

ALL ARE TRUE ABOUT ENTEROCOCCI EXCEPT :-

A-HAVE CARBOHYDRATE ANTIGEN OF GROUP D STREPTOCOCCI

B-POSITIVE AESCULIN HYDROLYSIS

C-GROW IN THE PRESCENCE OF BILE SALTS

D-DO NOT GROW IN THE PRESCENCE OF 6.5 % NACL NOR AT 45 C

THE DETERMINATION OF ASO TITRE IS USED IN THE LABORATORY DIAGNOSIS OF :-

A-TOXIC SHOCK SYNDROME

B-SCARLET FEVER

C-STREPTOCOCCAL PHARYNGITIS AND CELLULITIS

D-RHEUMATIC FEVER

SIGNIFICANT BACTERURIA , PURIA , AND ALKALINE URINE PROBABLY INDICATE URINARY TRACT INFECTION DUE TO::

A-STAPHYLOCOCCUS EPIDERMIDIS

B-E. COLI

C-PROTEUS VULGARIS

D-PSEUDOMONAS AERGINOSA

E-ENTEROCOCCUS FAECALIS

THE ONLY ENRICHMENT MEDIUM OF THE FOLLOWING IS :-

A-BLOOD AGAR

B-CHOCOLATE AGAR

C-CLED (CYSTINE LACTOSE ELECTROLYTE DEFICIENT)

D-SELENITE-F-BROTH.

STREPTOCOCCI RESPONSIBLE FOR THE MAJORITY OF HUMAN INFECTIONS ARE :-

D-GROUP A

B-BETA-HAEMOLYTIC STREPTOCOCCI

C-BACITRACIN-S AND CAMP (-)

D-ALL OF THESE

E-NONE OF THESE

TO DIFFERENTIATE BETWEEN NISSERIA GONORRHOEA AND NISSERIA MENINGITIDIS :

A-FERMENTATION OF DEXTROSE AND LACTOSE

B-FERMENTATION OF DEXTROSE AND MALTOSE

C-FERMENTATION OF MALTOSE AND LACTOSE

D-FERMENTATION OF MALTOSE AND SUCROSE

THE BEST SPECIMEN FOR RECOVERY OF POLIOMYELITIS VIRUS FOR CULTURE IS :-

A-CSF

B-BLOOD CLOT

C-THROAT SWAB

D-BUFFY COAT

E-STOOL

F-NONE OF THE ABOVE

G-ALL OF THE ABOVE

1. THE FINDING OF INGESTED RBCS IN A TROPHOZOITE IDENTIFIES :-

A-ENTAMOEBA COLI

B-ENDOLIMAX NANA

C-ENTAMOEBA HISTOLYTICA

D-IODAMOEBA BUTSCHLII

E-NONE OF THE ABOVE

F-ALL OF THE ABOVE

THE CHROMATOID BODIES RESEMBLE CIGAR-SHAPED OR SAUSAGE-SHAPED IN THE CYST OF :-

A-ENTAMOEBA COLI

B-ENTAMOEBA HISTOLYTICA

C-ENTAMOEBA GINGIVALIS

D-NONE OF THE ABOVE

THE MOST FAVOURABLE TIME TO FIND MALARIAL PARASITE IN BLOOD IS :-

A-THE PERIOD JUST BEFORE OR AT THE BEGINNING OF A PAROXSYM

B-DURING THE LATE PAROXSYMAL STAGE

C-THE PERIOD JUST FOLLOWING PAROXSYM

D-ALL OF THE ABOVE

THE DIAGNOSTIC STAGE FOR THE IDENTIFICATION OF GIARDIA LAMBLIA IN STOOL SAMPLE IS :-

A-CYST

B-TROPHOZOITE

C-CYST AND/ OR TROPHOZOITE

D-ALL OF THE ABOVE

E-NONE OF THE ABOVE

THE MALARIAL SPOROZOITE IN MAN INVADES:-

A-WHITE BLOOD CELLS

B-RBCS

C-RETICULO-ENDOTHELIAL CELLS

D-ALL OF THE ABOVE

WHICH OF THE FOLLOWING ENLARGES RBCS:

A-PLASMODIUM VIVAX

B-PLASMODIUM MALARIAE

C-PLASMODIUM FALCIPRUM

D-ALL OF THE ABOVE

MAN MAY ACQUIRE TOXOPLASMA FROM :-

A-MICE

B-CATS

C-DOGS

D-PIGS

ALL LEISHMANYAL INFECTIONS ARE TRANSMITTED BY

A-TSE TSE FLY

B-SAND FLY

C-HOUSE FLY

D-HORSE FLY

WHICH OF THE FOLLOWING NEITHER LAYS EGGS NOR DEPOSITES LARVAE IN THE INTESTINAL CANAL :-

A-HOOKWORMS

B-PINWORM

C-TRICHINELLA SPIRALIS

D-TRICHURIS TRICHURA

IDENTIFIED BY FINDING MAINLY THE RHABDITIFORM LARVAE IN IN FRESH STOOL :-

A-ASCARIS LUMBRICOIDES

B-ENTROBIUS VERMICULARIS

C-STRONGYLOIDES STERCORALIS

D-TRICHINELLA SPIRALIS

THE RESOLUTION OF THE BRIGHT FIELD MICROSCOPE IS :-

- A- $2.0\text{ }\mu\text{m}$
- B- $0.2\text{ }\mu\text{m}$
- C- $0.02\text{ }\mu\text{m}$
- D- $0.002\text{ }\mu\text{m}$

BACTERIOLOGICAL CULTURE MEDIA ARE GENERALLY STERILIZED USING :-

- A-THE AUTOCLAVE
- B-THE OVEN
- C-FILTERATION
- D-BUNSEN BURNER

SERUM CAN BE STERILIZED USING MEMBRANE FILTER OF POROSITY :-

- A- $0.22\text{ }\mu\text{m}$
- B- $2.3\text{ }\mu\text{m}$
- C- $0.6\text{ }\mu\text{m}$
- D- $0.8\text{ }\mu\text{m}$

THE TEMPERATURE-TIME CYCLE WHEN USING THE AUTOCLAVE TO STERILIZE IS :-

- A-121 C FOR 15 - 20 MINUTES
- B-112 C FOR 30 - 40 MINUTES
- C-135 C FOR 25 - 40 MINUTES
- D-100 C FOR 15 - 35 MINUTES

WHICH OF THE FOLLOWING STATEMENTS ABOUT CAMPYLOBACTER JEJUNI IS FALSE

- A-GRAM NEGATIVE CURVED BACILLI
- B-ARRANGED IN PAIRS (SEE-GULL)
- C-SLOW GROWTH
- D-GROWS ON XLD MEDIUM
- E-INCUBATION TEMPERATURE AT 42 C

DIRECT GRAM-STAINING IS ROUTINELY PERFORMED ON THE FOLLOWING SPECIMENS EXCEPT :-

- A-PUS
- B-ASPIRATED FLUIDS AND DISCHARGES
- C-CSF
- D-SPUTUM
- E-URINE

**F-STOOL**

BLOOD CULTURE IS INDICATED IN THE FOLLOWING BACTERIAL DISEASES EXCEPT

A-MENINGITIS

B-ENDOCARDITIS

C-GASTROENTERITIS

D-PYELONEPHRITIS

E-PNEUMONIA

all are true about both proteus mirabilis and proteus vulgaris

- a-swarming on nutrient agar
- b-h2s positive
- c-urease positive
- d-indole positive

when using a 10 x eye piece and a 10 x objective of a brightfield microscope , the total magnification will be :-

- a-10
- b-100
- c-1000
- d-10000

which of the following microscope would you use to examine a smear of bacteria stained by gram stain :-

- a-brightfield microscope**
- b-darkfield microscope
- c-dissecting microscope
- e-fluorescent microscope

which of the following would you use to examine a smear stained with a fluorochrome

- a-brightfield microscope
- b-dark field microscope
- c-polarizing microscope
- d-fluorscent microscope**

quellung test is positive with the following organisms except :-

- a-streptococcus pneumoniae
- b-haemophilus influenzae
- c-klebsiella pneumoniae
- d-corynebacterium diphtheriae

growth of vibrio cholerae on tcbs medium produces :-

- a-blue colonies
- b-yellow colonies
- c-green colonies
- d-orange colonies
- e-white colonies

the following organisms are lactose fermenters except :-

- a-e. Coli
- b-enterobacter colacae
- c-shigella sonnei**
- d-proteus spp.

the invasiveness of streptococcus pneumoniae is due to the production of :-

- a-haemolsins
- b-endotoxins
- c-extotoxins
- d-polysaccharide capsule

the following are members of the family enterobacteriaceae except :-

- a-klebsiella rhinoscleromatis
- b-serratia liquefaciens
- c-providencia alcalifaciens
- d-yersinia pseudotuberculosis
- e-campylobacter fetus

in significant bacteriuria the cfu/ml is :-

- a-more than ten to the power of five
- b-less than ten to the power of five
- c-more than ten to the power of three
- d-less than ten to the power of three

the test used to differentiate pathogenic staphylococci is

- a-catalase
- b-oxidase
- c-coagulase
- d-aso titre

group a streptococci are differentiated from other beta-haemolytic streptococci by :-

disc containing :-

- a-neomycin
- b-optochin
- c-bacitracin
- d-novobiocin

for blood culture the best anticoagulant is

- a-citrate
- b-oxalate
- c-sodium polyanesthol sulphonate
- d-heparin

the organism which shows satellitism around staph aureus on blood agar is

- a-haemophilous influenzae
- b-haemophilous ducreyi
- c-bordetella pertusis
- d-moraxella acunat

the imvic reaction of e. Coli are :-

- a- + + - -
- b- - - + +
- c- + + + -
- d- - - - +

blood culture may be indicated for :-

- a-clostridium tetani
- b-corynebacterium diphtheriae
- c-*sgigella dysentriae*
- d-mycobacterium tuberculosis
- e-none of these
