Honeybees and Flowers

Honeybees and flowers are two species that share a symbiotic relationship. The honeybee helps the flower and the flower helps the honeybee. How does this relationship work? Honeybees eat the nectar (sugary water), and pollen (yellow protein powder) that are made by flowers. Honeybees need the pollen to survive and grow. Since flowers bloom in the springtime, this is the season that most bees are born. Honeybees use the nectar from flowers to make honey. Honeybees store their honey in their hive, or home. When there is no nectar available, bees eat the stored up honey in their hive. In turn, flowers need honeybees too. In order to survive, flowers need to spread their pollen. When flower pollen is spread to another flower, the new flower can make seeds, or baby plants. This is called pollination. When honeybees eat the pollen from a flower, they often get pollen on their bodies. Then when they move to the next flower, some of that pollen falls off, and the new flower has been pollinated. Because flowers need honeybees, they come in bright colors and have a sweet smell, which attract the honeybees. The relationship between honeybees and flowers is a good example of symbiosis. Neither can survive without the other.

Ingvar Kamprad

Worth: \$23 billion

Industry: Retail Furniture

Country of Citizenship: Sweden

Ingvar Kamprad grew up on a farm in Sweden. From an early age, it was clear that he was going to be a business entrepreneur. Even as a young boy, he was interested in business and making money. He used to buy large quantities of matches in Stockholm very cheaply. Then he would ride around his small village on his bicycle, selling individual matches to his neighbors for a profit. Then Kamprad started to sell fish, holiday decorations, flower and vegetable seeds, and pens and pencils. Kamprad used to enjoy finding new ways to make money. Kamprad excelled in school and when he graduated, his father gave him a little money as a reward. He used this money to establish the furniture store IKEA. The name IKEA is an acronym. It is made up of the initials of his name (Ingvar Kamprad), the name of the farm he grew up on, Elmtaryd, and the name of the nearest village, Agunnaryd. IKEA has since grown into the world's largest furniture retailer. There are over 301 IKEA stores operating in 37 different countries.

Stunt Doubles

One of the most dangerous jobs in the film industry is the job of a stunt double. A stunt double is a person who replaces an actor while filming dangerous scenes in a film. For example, while filming a James Bond story, the actor who plays James Bond will not actually participate in the car chase, or jump off a hundred-foot cliff into the ocean below. A trained professional, called a stunt double, will do this instead. Stunt doubles take the place of actors when filming scenes that involve such things as gun fights, falls from high places, scenes involving fire, explosions, and car chases and crashes . Although being a stunt double may sound exciting, filming a scene can be both long and exhausting. Sometimes the stunt double has to spend hours in an uncomfortable situation, such as standing in cold water or on top of an icy mountain. Dangerous stunts may also have to be performed over and over again to get the right camera angles . Good stunt doubles are professionally trained in many different activities. They need to have basic skills in not only stage (or pretend) fighting, rock climbing, skiing, sky diving, but also scuba diving, martial arts, high-performance driving, and horseback riding. In recent years, more and more stunt scenes are being created on the computer, reducing the need for stunt doubles. But for truly realistic images, stunt doubles will always be in demand .

Advertising in a Global Market

These days we live in a global marketplace. Just look inside your refrigerator. You may have bought all of your food from your local grocery store, but in reality, your bananas came from Costa Rica, your chocolate is from Switzerland, your orange juice might be from South Africa, and your meat might be from Argentina. And your refrigerator may contain the exact same foods as the refrigerator of someone else on the other side of the world. Also, you are probably wearing the same clothing brands as a person on the other side of the world and maybe watching the same TV program. In a global marketplace, consumers all over the world can buy and use the exact same products. In order to be successful today, companies need to be transnational. They must operate and sell products in many different countries, and their products must compete with products from all over the world. Advertising companies are faced with the challenge of marketing their products to appeal to consumers in many different countries. In some cases, products that are extremely successful in one part of the world do not sell at all in another part of the world. This is often due to failed advertising campaigns.

Advertisers must take the time to research each individual country so that they can find out what will be successful in that country and what kind of advertising the people will respond to .

1. In a global marketplace, people all over the world ____ .

A. can buy the same products

B. can work in different countries

C. can eat local fruit

D. can grow the same foods.

2. A failed advertising campaign might cause products ____ .

A. to taste bad

B. to not be delivered

C. to not sell

D. to not work

3. Some ____ of clothing are sold in the U.S., Europe, and Asia.

A. consumers

B. brands

C. logos

D. formulas

4. You can buy many of the same products ___ you go in the world.

A. since

B. because

C. where

D. wherever

5. _____ the global economy, companies have to work harder to compete.

Reading

Read the text and answer the questions. Write T or F at the end of each statement .

For many animals in the wild, it is immediately clear whether the animal is male or female. Dimorphism is the term to describe all the differences between males and females of the same species. The physical differences are the easiest to see. These differences may be in size, color, or body structure. For example, the following are a few species with obvious differences. The fearsome male lion has a thick mane of hair around his head. The female lion does not. The male African elephant has large, threatening tusks of ivory. The female does not. Masculine deer and elk have large antlers, while feminine deer and elk do not. Also, in many species, the male is larger than the female, although there are a few exceptions . There are many reasons for dimorphism (different appearance) in animals. For example, among birds, males are often more brightly colored and flashy. On the other hand, female birds are often smaller and plainer. This offers protection to the females when they are guarding their nests. They are not noticeable to predators .

Some differences allow different genders to get along with each other and live together harmoniously. For example, the male hummingbird and the female hummingbird have beaks of different lengths. This ensures that they do not have to compete with each other for food. They can only drink from different kinds of flowers. The same is true for some species of larger birds, like eagles. The female eagle has a larger beak, so she can eat larger prey, such as rabbits, or large fish. The male, with his smaller beak, can only eat smaller prey. So in the animal world, at least, differences serve a very important purpose. They help species to survive and thrive.

1. Gender differences among animals helps species survive. (T)
2. Dimorphism allows the male and female hummingbird to get along better. (T)
3. Dimorphism refers only to physical differences between genders. (F)
4. Male elephants do not have tusks, but female elephants do. (F)
5. Male deer have antlers, and male elk do too. (T)
